

Example

Cambridge University has a list of courses on the website <http://www.cambridge.ac.uk/courses>. Cambridge follows a system of grading courses for its students, and each course is given a grade that ranges from excellent (grade A) to poor (grade F). The following table shows the grades for each course in the Department of Education. We will use a small sample of the data to illustrate the process.

(a) Use Excel to calculate the following table:

	Relative frequency	In the sample of 100 courses, the number for the course was A	In the population of 1000 courses, the number for the course was A	In the sample of 100 courses, the number for the course was B	Relative frequency
A	0.10	10	100	10	0.10
B	0.20	20	200	20	0.20
C	0.30	30	300	30	0.30
D	0.20	20	200	20	0.20
E	0.10	10	100	10	0.10
F	0.10	10	100	10	0.10

(b) Based on the data you completed in question (a), what proportion of courses in the Department of Education are excellent (grade A)?

(c) Suppose the sample is selected at random. Is

- the proportion of excellent courses in the sample equal to the proportion of excellent courses in the population?
- the sample proportion of excellent courses equal to the population proportion?

(d) What is the standard error of the sample proportion?

(e) What is the standard error of the sample proportion?

Exercise

- (a) Suppose we have a sample of 100 courses from the Department of Education. The sample proportion of excellent courses is 0.10. Is the sample proportion of excellent courses equal to the population proportion of excellent courses? Explain.
