## Test Format:

- Multiple choice and problems

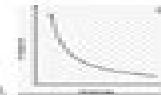

Items that will be provided for the test (read important notes at the bottom):

- Gas law equations\*
- The value of R
- Pressure conversion factors
- I will provide the equations on the test. You are responsible for knowing which laws the equations describe (ex: I will give you  $P_1 \times V_1 = P_2 \times V_2$  and you must know that this is Boyle's Law).

- What is the name of the model we currently use to explain the behavior of gases? kinetic molecular theory (KMT).
- Define the kinetic molecular theory (KMT). Gases are in constant motion with elastic collisions.
- The KMT makes many assumptions about the Size, motion, and energy of gas particles.
- According to the KMT, do gas particles experience attractive or repulsive forces? Explain why or why not. Neither- they are too far apart.
- Completely describe the motion of gas particles according to the KMT. Constant, Random, Straight paths, different velocity.
- Define elastic collision. No kinetic energy is lost- just transferred between particles.
- What determines the kinetic energy of a particle? Mass and velocity.
- In a sample of a single gas, do all particles have the same kinetic energy? Explain why or why not. No – they have a different velocity.
- Define temperature. Measurement of kinetic energy.
- Explain why gases have a low density. Lots of space between particles (large volume).
- Why are gases compressible? Lots of empty space between particles.
- Why do gases expand to fill a container? No attractive or repulsive forces.
- Why can gas particles flow easily past each other? No attractive forces.
- Define diffusion. Movement of one material through another.
- Define effusion. Gas escapes through tiny openings.
- Describe how diffusion depends on the mass of the particles. Diffusion is dependent on mass, so less mass more diffusion.
- Use the KMT to explain why a balloon expands as you blow air into it. Particles are in-constant motion and collide with their surroundings expanding the balloon.

**Boyle's Law:** Answer the following questions about Boyle's Law.

- Describe Boyle's Law in your own words. As pressure increases, volume decreases.
- What is the formula?  $P_1V_1 = P_2V_2$
- What are the variables? What are the possible units used in the formula? Pressure and volume; atm, kPa, mL, L.
- What is constant? temperature

- Give an example to help explain the law (you should have some type of visual of your example).
- What would a graph of pressure vs. volume of a gas look like according to Boyle's Law?

**Charles' Law:** Answer the following questions about Charles' Law.

- Describe Charles' Law in your own words. Increase temperature, increase volume.
- What is the formula?  $\frac{V_1}{T_1} = \frac{V_2}{T_2}$
- What are the variables? What are the possible units used in the formula? Temperature and volume (kelvin, mL, L).
- What is constant? Pressure
- What is very important to remember about the temperature variable when using this formula? It must be in kelvin.
- Give an example to help explain Charles's Law (you should have some type of visual of your example).

- What would a graph of temperature vs. volume of a gas look like according to Charles's Law?

**Gay-Lussac's Law:** Answer the following questions about Gay-Lussac's Law.

- Describe Gay-Lussac's Law in your own words. As pressure increases, temperature increases.
- What is the formula?  $\frac{P_1}{T_1} = \frac{P_2}{T_2}$
- What are the variables? What are the possible units used in the formula? Pressure and temperature (kelvin, atm, kPa, torr)
- What is constant? volume
- What is very important to remember about the temperature variable when using this formula? It must be in kelvin.
- Give an example to help explain Gay-Lussac's Law (you should have some type of visual of your example).
