**Colour and Light in the Ocean** Victor Martinez-Vicente, Astrid Bracher, Didier Ramon, Shubha Sathyendranath, Tiit Kutser, 2020-03-26 CLEO publications in Frontiers in Marine Science Foreword Josef Aschbacher Director of ESA's Earth Observation Programmes Satellite data have drastically changed the view we have of the oceans Covering about 70% of Earth's surface, oceans play a unique role for our planet and for our life, but large areas remain unexplored and are difficult to reach Since the 1980s, Earth-orbiting satellites have helped to observe what is happening at the ocean surface Sensors like CZCS, AVHRR, SeaWiFS and MODIS provided the

first ocean colour data from space Starting in 2002 ESA's Medium Resolution Imaging Spectrometer MERIS on board the environmental satellite Envisat provided detailed information on phytoplankton biomass and concentrations of other matter in the global oceans These satellite observations laid the groundwork for studying the marine environment and how it responds to climate change and the research community has since delivered information on the variability of marine ecosystems Part of this work is reflected in this stunning collection of peer reviewed publications presented at the workshop Colour and Light in the Ocean from Earth Observation CLEO held at ESA's ESRIN site in Frascati Italy on 6-8 September 2016 The event attracted more than 160 participants from all over the world including remote sensing experts marine ecosystem modelers in situ observers and users of Earth observation data Scientifically the meeting covered applications in climate studies over primary productivity and ocean dynamics to pools of carbon and phytoplankton diversity at global and regional scales It also demonstrated the potential of Earth observation and its contribution to modern oceanography Looking to the future new satellites developed by ESA under the coordination of the European Commission will further our scientific and operational observations of the seas With Sentinel 3A in orbit and its twin Sentinel 3B following in 2017 there is a new category of data available for operational oceanographic applications and climate studies for years to come These data are free and easy to access by anyone interested Looking at the role of oceans in our daily lives I am sure that this collection of scientific excellence will be valued by scientists of today and will inspire the next generation to carry these ideas into the future

**Federal Register**, 2013-06 *Moral Authority, Men of Science, and the Victorian Novel* Anne DeWitt, 2013-07-18 Nineteenth century men of science aligned scientific practice with moral excellence as part of an endeavor to secure cultural authority for their discipline Anne DeWitt examines how novelists from Elizabeth Gaskell to H G Wells responded to this alignment Revising the widespread assumption that Victorian science and literature were part of one culture she argues that the professionalization of science prompted novelists to deny that science offered widely accessible moral benefits Instead they represented the narrow aspirations of the professional as morally detrimental while they asserted that moral concerns were the novel's own domain of professional expertise This book draws on works of natural theology popular lectures and debates from the pages of periodicals to delineate changes in the status of science and to show how both familiar and neglected works of Victorian fiction sought to redefine the relationship between science and the novel
