X-kit FET Grade 12 MATHEMATICAL LITERACY Derek Swart, 2009 *Research for Educational Change* Jill Adler, Anna Sfard, 2016-06-17 Research for Educational Change presents ways in which educational research can fulfil its commitments to educational practice Focussing its discussion within the context of mathematics education it argues that while research generated insights can have beneficial effects on learning and teaching the question of how these effects are to be generated and sustained is far from evident The question of how to turn research into educational improvement is discussed here in the context of learning and teaching hindered by poverty and social injustice In the first part of the book four teams of researchers use different methodologies while analysing the same corpus of data collected in a South African mathematics classroom In the second part each of these teams makes a specific proposal about what can be done and how so that its research generated insights have a tangible beneficial impact on what is happening in mathematical classrooms Combining two discourses that of researchers speaking to one another and that of researchers communicating their insights to those responsible for educational practice the book deals with the perennial question of communication between those who study educational processes and those who are directly responsible for teacher education educational research and classroom practices This book will be key reading for postgraduates researchers and academics in education and particularly in the areas of mathematics education education research teacher education and classroom practice It will also appeal to teacher educators practitioners and undergraduate students interested in educational research *Brookings Papers on Education Policy: 2003* Diane Ravitch, 2010-12-01 In 1983 the seminal report issued by the National Commission on Excellence in Education *A Nation at Risk* charged that most American high schoolers were following a general course of instruction choosing neither the college preparatory track nor the vocational option This pattern the report complained had fostered low expectations and a curricular hodge podge of classes that failed to prepare students for college or work The commission called on states to implement academic requirements for all students regardless of background including four years of English and three years each of science mathematics and social studies Students should not be sorted by their presumed future destinations the commission reasoned but should be offered an equal opportunity to get a high quality education to fit them either for postsecondary education or the modern workplace Two decades after the commission called on states to reform the high school environment and raise graduation requirements the Brown Center on Education Policy at the Brookings Institution convened a group of prominent scholars to explore the current state of America's high schools focusing on new research about reforming these institutions that are so important in the lives of the nation's adolescents The questions considered reflected the diversity of the participants and covered a variety of areas historical international sociological and practical Data gathered by the U S Department of Education show students today are taking many more advanced courses in mathematics and the sciences while at the same time test scores do not reflect the increases in

enrollments in academic courses In addition large score gaps remain among students from different social groups Reform of the high schools must take into account the elementary and middle schools that prepare students and the postsecondary institutions to which students aspire Adolescent culture and students views about school and academic work play important roles in student achievement as do the family and contemporary society in shaping of adolescent behavior No matter their background all participants agreed that the key to a successful high school rests with the extent to which it recognizes and strengthens its commitment to the intellectual growth of its students *Teaching Statistics in School*
