Blunk, 1998-10-13 The teaching and learning of mathematics in K 12 classrooms is changing New curricula and methods engage learners in working on real problems An essential feature of this work involves teacher and students in talking mathematics How can students learn to do this kind of talking What can they learn from doing it This book addresses these questions by looking at the processes of formulating problems interpreting contexts in which problems arise and arguing about the reasonableness of proposed solutions The studies in this volume seek to retain the complexity of classroom practice rather than looking at it through a particular academic lens     *What Would It Take to Make an Ed School Great?* John Schwille, 2023-06-01 This book brings new life to the long standing debate in the United States over whether teacher education K 12 teaching and the role that universities play in this work can be revolutionized so that they are less subject to self defeating conventions and orthodoxy to the benefit of all the nation s children Author John Schwille reexamines the ambitious reform agenda that Michigan State University teacher education leaders brought to the national table in the 1980s and 1990s This attempted revolution mobilized unprecedented resources to the struggle to transform teaching and learning of subject matter Conveying this history through the words of the teachers and scholars responsible for it Schwille shows that a great deal was achieved but many of the lessons learned continue to be ignored     *The Software Encyclopedia* 2001 ,2001     Algorithms and Computation Khaled Elbassioni, Kazuhisa Makino, 2015-12-07 This book constitutes the refereed proceedings of the 26th International Symposium on Algorithms and Computation ISAAC 2015 held in Nagoya Japan in December 2015 The 65 revised full papers presented together with 3 invited talks were carefully reviewed and selected from 180 submissions for inclusion in the book The focus of the volume is on the following topics computational geometry data structures combinatorial optimization and approximation algorithms randomized algorithms graph algorithms and FPT computational complexity graph drawing and planar graphs online and streaming algorithms and string and DNA algorithms     Catalog of Copyright Entries.
