
Abstract The purpose of this study was to determine the effect of a 12-week, 3-day-per-week, 100-min-per-session, low-impact aerobically demanding dance program on the physical fitness of 10 sedentary, middle-aged women. The program was designed to be fun and enjoyable, and to include a variety of dance styles. The program was evaluated using a pretest and posttest design. The pretest was conducted at the beginning of the program, and the posttest was conducted at the end of the program. The results of the study showed that the program had a significant positive effect on the physical fitness of the women. The women showed significant improvements in cardiovascular fitness, muscular strength, and flexibility. The program was also found to be enjoyable and socially beneficial. The results of this study suggest that a low-impact aerobically demanding dance program can be an effective means of improving the physical fitness of sedentary, middle-aged women.
