1. Identify the type of correlation that exists and sketch in an appropriate line of best fit.

2. Identify the type of correlation that exists for each of the following correlational coefficients.

$r = -0.21$

$r = 0.0$

$r = 97$

$r = -0.67$

3. In your own words, explain what a correlational coefficient represents. Use examples and be as specific as possible.

4. Determine which line of best fit correctly represents each graph. Write the correct equation under the matching graph.

Hambleton, H.

Swaminathan,2013-11-11 In the decade of the 1970s item response theory became the dominant topic for study by measurement specialists But the genesis of item response theory IRT can be traced back to the mid thirties and early forties In fact the term Item Characteristic Curve which is one of the main IRT concepts can be attributed to Ledyard Tucker in 1946 Despite these early research efforts interest in item response theory lay dormant until the late 1960s and took a backseat to the emerging development of strong true score theory While true score theory developed rapidly and drew the attention of leading psychometricians the problems and weaknesses inherent in its formulation began to raise concerns Such problems as the lack of invariance of item parameters across examinee groups and the inadequacy of classical test procedures to detect item bias or to provide a sound basis for measurement in tailored testing gave rise to a resurgence of interest in item response theory Impetus for the development of item response theory as we now know it was provided by Frederic M Lord through his pioneering works Lord 1952 1953a 1953b The progress in the fifties was painstakingly slow due to the mathematical complexity of the topic and the nonexistence of computer programs *The Mathematics of Shuffling Cards* Persi Diaconis,Jason Fulman,2023-03-20 This book gives a lively development of the mathematics needed to answer the question How many times should a deck of cards be shuffled to mix it up The shuffles studied are the usual ones that real people use riffle overhand and smooshing cards around on the table The mathematics ranges from probability Markov chains to combinatorics symmetric function theory to algebra Hopf algebras There are applications to magic tricks and gambling along with a careful comparison of the mathematics to the results of real people shuffling real cards The book explores links between shuffling and higher mathematics Lie theory algebraic topology the geometry of hyperplane arrangements stochastic calculus number theory and more It offers a useful springboard for seeing how probability theory is applied and leads to many corners of advanced mathematics The book can serve as a text for an upper division course in mathematics statistics or computer science departments and will be appreciated by graduate students and researchers in mathematics statistics and computer science as well as magicians and people with a strong background in mathematics who are interested in games that use playing cards *Cultural Validity in Assessment* María del Rosario Bastera,Elise Trumbull,Guillermo Solano-Flores,2011-04-12 What is assessment and how is it a cultural practice How does failure to account for linguistic and cultural variation among students jeopardize assessment validity What is required to achieve cultural validity in assessment This resource for practicing and prospective teachers as well as others concerned with fair and valid assessment provides a thorough grounding in relevant theory research and practice The book lays out criteria for culturally valid assessment and recommends specific strategies that teachers can use to design and implement culturally valid classroom assessments Assessment plays a powerful role in the process of education in the US and has a disproportionately negative impact on students who do not come from mainstream middle class backgrounds Given the significance of testing in education today cultural validity in assessment is an urgent issue facing educators This book is essential reading for addressing this
