educators reinforced by federal requirements in developing tests that accurately reflect local educational standards and goals The other is a strong push to gather information about the performance of students and schools relative to national and international standards and norms The difficulty of achieving these two goals simultaneously is exacerbated by both the long standing American tradition of local control of education and the growing public sentiment that students already take enough tests Finding a solution to this dilemma has been the focus of numerous debates surrounding the Voluntary National Tests proposed by President Clinton in his 1997 State of the Union address It was also the topic of a congressionally mandated 1998 National Research Council report Uncommon Measures Equivalence and Linkage Among Educational Tests and was touched upon in a U S General Accounting Office report Student Testing Issues Related to Voluntary National Mathematics and Reading Tests More recently Congress asked the National Research Council to determine the technical feasibility validity and reliability of embedding test items from the National Assessment of Educational Progress or other tests in state and district assessments in 4th grade reading and 8th grade mathematics for the purpose of developing a valid measure of student achievement within states and districts and in terms of national performance standards or scales This report is the response to that congressional mandate

Beating the Numbers, 1980 *Using Basic Skills Testing to Improve the Effectiveness of Remediation in Employment and Training Programs for Youth* Robin Morris,Lori Strumpf,Susan P. Curnan,1988 *Maximizing Intelligence* David Armor,2017-07-12 The nature versus nurture controversy dates back to at least the nineteenth century How much of a role does genetics or environment play in accounting for reasoning skill and other intellectual aptitudes At a time when the public school system in the United States is under attack this debate has taken center stage in arguments about what accounts for differences in academic achievement Maximizing Intelligence

convincingly argues that while both genetics and environment play a role in a child's intelligence environmental factors especially at an early age are of primary importance Working from this premise Armor suggests how intelligence may be heightened Armor presents four propositions about intelligence His first is that intelligence exerts a major influence on educational and occupational success following a chronological sequence from a child's cognitive skills learned before school to academic success during the school years to eligibility for college His second proposition is that intelligence can be changed at least within limits There is ample evidence that a child's intelligence is not fully given at birth but continues to evolve and change at least through the early elementary school years although at a declining rate Proposition three is that intelligence is influenced by a series of risk factors and most of the influence occurs before a child reaches school age Risk factors include parent intelligence and education family income family structure and size nutrition and specific parenting behaviors The fourth proposition flows from the second and third that the most promising avenues for maximizing intelligence come from a child's parents Armor persuasively argues for a whole family approach whereby government programs are modified or created to inform parents of risk factors and to reward behaviors that optimize positive outcomes Maximizing Intelligence is meticulously researched

Child and Youth Well-being in China Lijun Chen, Dali L. Yang, Di Zhou, Qiang Ren, 2018-12-07
The true measure of any society is how it treats its children who are in turn that society's future
Making use of data from the longitudinal Chinese Family Panel Studies survey the authors of this timely study provide a multi faceted description and

analysis of China's younger generations. They assess the economic, physical, and social/emotional well-being as well as the cognitive performance and educational attainment of China's children and youth. They pay special attention to the significance of family and community contexts, including the impact of parental absence on millions of left-behind children. Throughout the volume, the authors delineate various forms of disparities, especially the structural inequalities maintained by the Chinese Party-state and the vulnerabilities of children and youth in fragile families and communities. They also analyze the social attitudes and values of Chinese youth. Having grown up in a period of sustained prosperity and greater individual choice, the younger Chinese cohorts are more independent in spirit, more open-minded socially, and significantly less deferential to authority than older cohorts. There is growing recognition in China of the importance of investing in children's future and of helping the less advantaged. Substantial improvements in child and youth well-being have been achieved in a time of growing economic prosperity. Strong political commitment is needed to sustain existing efforts and to overcome the many obstacles that remain. This book will be of considerable interest to researchers of Chinese society and development.

The Research Review for School Leaders Volume III is specifically designed as a practical resource for school leaders whose schedules preclude opportunities to locate and review key research on every issue they must address. It places comprehensive current and accessible reviews of educational research at their fingertips and is organized to make the research and practices it summarizes useful to them in their professional endeavors.
