Math Paper 43 May June 2013:

Numerical Development - From cognitive functions to neural underpinnings Korbinian Moeller, Elise Klein, Klaus F Willmes - von Hinckeldey, Karin Kucian, 2015-02-24 Living at the beginning of the 21st century requires being numerate because numerical abilities are not only essential for life prospects of individuals but also for economic interests of post industrial knowledge societies Thus numerical development is at the core of both individual as well as societal interests There is the notion that we are already born with a very basic ability to deal with small numerosities Yet this often called number sense seems to be very restricted approximate and driven by perceptual constraints During our numerical development in formal e g school but also informal contexts e g family street we acquire culturally developed abstract symbol systems to represent exact numerosities in particular number words and Arabic digits refining our numerical capabilities In recent years numerical development has gained increasing research interest documented in a growing number of behavioural neuro scientific educational cross cultural and neuropsychological studies addressing this issue Additionally our understanding of how numerical competencies develop has also benefitted considerably from the advent of different neuro imaging techniques allowing for an evaluation of developmental changes in the human brain In sum we are now starting to put together a more and more coherent picture of how numerical competencies develop and how this development is associated with neural changes as well In the end this knowledge might also lead to a better understanding of the reasons for atypical numerical development which often has grievous consequences for those who suffer from developmental dyscalculia or mathematics learning disabilities Therefore this Research Topic deals with all aspects of numerical development findings from behavioural performance to underlying neural substrates from cross sectional to longitudinal evaluations from healthy to clinical populations To this end we included empirical contributions using different experimental methodologies but also theoretical contributions review articles or opinion papers

Sudden arrhythmic death: from basic science to clinical practice

Gareth D. Matthews, 2014-10-02 With upwards of 4.5 million deaths worldwide each year and more than one tenth of these occurring in those with no previously documented heart disease sudden arrhythmic death (SAD) is both a major public health burden and a highly emotive issue for society at large. Recent years have witnessed a marked expansion in our knowledge of the physiology underlying SAD both in the context of hereditary and acquired cardiac disorders. Thanks largely to work in genetically modified animals, the growth in our understanding of mechanisms underlying arrhythmia in the hereditary channelopathies has been particularly marked. Our growing knowledge of the fundamental mechanisms underlying SAD has so far failed to spur substantial developments in clinical practice. Despite a large body of work in both humans and animals, it remains impossible to confidently identify those at high risk of SAD, making pre-emptive therapy a challenge. What is more, with the thankful exception of the implantable cardioverter defibrillators and pharmacological agents in very specific situations, there has been depressingly little progress in finding new and effective therapies. This Research Topic aims to go some way towards bridging the gap between advances in basic science and the development and delivery of new therapies. It brings together original research contributions and review articles from key opinion leaders in the field, focusing on the direct clinical implications of the basic science research now and in the future.

The People's Platform Astra Taylor, 2014-04-15 An invaluable primer for anyone seeking to understand why our networked world isn't all that it is cracked up to be The Guardian The Internet has been hailed as an unprecedented democratizing force a place where everyone can be heard and all can participate equally But how true is this claim In a seminal dismantling of techno-utopian visions The People's Platform argues that for all that we tweet and like and share the Internet in fact reflects and amplifies real world inequities at least as much as it ameliorates them Online just as off-line attention and influence largely accrue to those who already have plenty of both What we have seen so far Astra Taylor says has been not a revolution but a rearrangement Although Silicon Valley tycoons have eclipsed Hollywood moguls a handful of giants like Amazon Apple Google and Facebook remain the gatekeepers And the worst habits of the old media model the pressure to seek easy celebrity to be quick and sensational above all have proliferated on the web where aggregating the work of others is the surest way to attract eyeballs and ad revenue When culture is free creative work has diminishing value and advertising fuels the system The new order looks suspiciously like the old one We can do better Taylor insists The online world does offer a

God, Schools, and Government Funding

Laurence H. Winer, Nina J. Crimm, 2016-04-15 In recent years a conservative majority of the U S Supreme Court over vigorous dissents has developed circumventions to the Establishment Clause of the First Amendment that allow state legislatures unabashedly to use public tax dollars increasingly to aid private elementary and secondary education This expansive and innovative legislation provides considerable governmental funds to support parochial schools and other religiously affiliated education providers That political response to the perceived declining quality of traditional public schools and the vigorous school choice movement for alternative educational opportunities provokes passionate constitutional controversy Yet the Court s recent decision in *Arizona Christian School Tuition Organization v Winn* inappropriately denies taxpayers recourse to challenge these proliferating tax funding schemes in federal courts Professors Winer and Crimm clearly elucidate the complex and controversial policy legal and constitutional issues involved in using tax expenditures mechanisms such as exclusions deductions and credits that economically function as government subsidies to finance private religious schooling The authors argue that legislatures must take great care in structuring such programs and set forth various proposals to ameliorate the highly troubling dissention and divisiveness generated by state aid for religious education

Stochastic Dominance

Haim Levy, 2013-03-09 This book is devoted to investment decision making under uncertainty The book covers three basic approaches to this process a The stochastic dominance approach developed on the foundation of

von Neumann and Morgenstern expected utility paradigm 2 b The mean variance approach developed by Markowitz on the foundation of von Neumann and Morgenstern's expected utility or simply on the assumption of a utility function based on mean and variance c The non expected utility approach focusing on prospect theory and its modified version cumulative prospect theory This theory is based on an experimental finding that subjects participating in laboratory experiments often violate expected utility maximization They tend to use subjective probability beliefs that differ systematically from the objective probabilities and to base their decisions on changes in wealth rather than on total wealth The above approaches are discussed and compared in this book We also discuss cases in which stochastic dominance rules coincide with the mean variance rule and cases in which contradictions between these two approaches may occur We then discuss the relationship between stochastic dominance rules and prospect theory and establish a new investment decision rule which combines the two and which we call prospect stochastic dominance Although all three approaches are discussed most of the book is devoted to the stochastic dominance paradigm
