**Abstract:** *Chlamydia pneumoniae* (Cpn) is a common human pathogen that has been associated with a variety of diseases. Cpn has been shown to be present in the placenta and fetal membranes, and it has been suggested that Cpn infection during pregnancy may lead to adverse outcomes. The purpose of this study was to determine the prevalence of Cpn in the placenta and fetal membranes of healthy term infants. A total of 100 placenta and fetal membranes were collected from healthy term infants and analyzed for the presence of Cpn using a polymerase chain reaction (PCR) assay. The results showed that Cpn was present in 12% of the placenta and 8% of the fetal membranes. These findings suggest that Cpn infection may be present in the placenta and fetal membranes of healthy term infants, and further research is needed to determine the clinical significance of these findings.
