Automotive Quality Systems Handbook David Hoyle, 2000-07-28 The Automotive Quality Systems Handbook is a step by step guide to interpreting and implementing the ISO TS 16949 Accepted by major vehicle manufacturers as an alternative to the existing US German French and Italian automotive quality system requirements this Technical Specification defines specific requirements for the application of ISO 9001 1994 throughout the automotive supply chain While initially the standard will be voluntary for the first time second and third tier suppliers may be faced with pressure to undergo third party registration After the year 2000 the next version of the standard has actually replaced the four existing standards AVSQ EAQF QS 9000 and VDA 6.1 and the price of entry to the global automotive market is conformance to this new standard This handbook is an essential and comprehensive guide to enable organizations to interpret and implement the ISO TS 16949 Unlike other books on the subject each element clause and requirement is analyzed in detail with guidance provided for its implementation The handbook is written primarily for implementers and discerning managers for instructors and auditors and contains a range of solutions that would be acceptable in the automobile industry It includes details of the certification scheme the differences with existing standards check lists questionnaires tips for implementers flow charts and a glossary of terms This book gives more than an overview it tells how you to do it Contains detailed instructions and check lists for implementation Addresses all ISO requirements

Good Cascade Impactor Practices, AIM and EDA for Orally Inhaled Products Terrence P. Tougas, Jolyon P. Mitchell, Svetlana A. Lyapustina, 2013-04-10 The purpose of this publication is to introduce a new simpler and more effective way in which to interpret pharmaceutical aerosol particle size data from orally inhaled products OIPs Currently the compendial and regulatory requirements dictate the need for measurements by full resolution multi stage cascade impactor CI a process that is demanding for the operator time consuming prone to experimental error and challenging for method transfers from one laboratory to another Furthermore we shall show that the current practice of reducing information from mass weighted aerodynamic particle size distribution APSD measurements through the use of CI stage groupings is not the most effective decision making tool for OIP quality control QC in comparison with newly introduced mutually independent efficient data analysis EDA metrics that can be derived either from full resolution or abbreviated impactor measurements AIM
