Flood Assessment Eric W. Harmsen,Megh R. Goyal,2017-12-22 About 7 000 people lose their lives and nearly 100 million people are adversely affected by floods each year worldwide Flooding occurs in almost every part of the world and is the result of extreme rainfall Severe flooding also costs billions of dollars each year in damage and economic losses This new volume focuses on two detailed studies that employ physically based hydrologic models to predict flooding in the particularly challenging environment of small watersheds with mountainous terrain and high intensity high variability rainfall

Wastewater Treatment Plants Syed R. Qasim,2017-11-22 Step by step procedures for planning design construction and operation Health and environment Process improvements Stormwater and combined sewer control and treatment Effluent disposal and reuse Biosolids disposal and reuse On site treatment and disposal of small flows Wastewater treatment plants should be designed so that the effluent standards and reuse objectives and biosolids regulations can be met with reasonable ease and cost The design should incorporate flexibility for dealing with seasonal changes as well as long term changes in wastewater quality and future regulations Good planning and design therefore must be based on five major steps characterization of the raw wastewater quality and effluent pre design studies to develop alternative processes and selection of final process train detailed design of the selected alternative contraction and operation and maintenance of the completed facility Engineers scientists and financial analysts must utilize principles from a wide range of disciplines engineering chemistry microbiology geology architecture and economics to carry out the responsibilities of designing a wastewater treatment plant The objective of this book is to present the technical and nontechnical issues that are most commonly addressed in the planning and design reports for wastewater treatment facilities prepared by practicing engineers Topics discussed include facility planning process description process selection logic mass balance calculations design calculations and concepts for equipment sizing Theory design operation and maintenance trouble shooting equipment selection and specifications are integrated for each treatment process Thus delineation of such information for use by students and practicing engineers is the main purpose of this book **Systems Analysis and Modeling** Donald W. Boyd,2000-10-19

Systems Analysis and Modeling presents a fresh new approach to systems analysis and modeling with a systems science flavor that stimulates systems thinking After introducing systems modeling principles the ensuing wide selection of examples aptly illustrate that anything which changes over time can be modeled as a system Each example begins with a knowledge base that displays relevant information obtained from systems analysis The diversity of examples clearly establishes a new protocol for synthesizing systems models Macro to micro top down approach Multidisciplinary examples Incorporation of human knowledge to synthesise a systems model Clear and concise systems delimitation Complex systems using simple mathematics Exact reproduction of historical data plus model generated secondary data Systems simulation via systems models

Hydraulics of Levee Overtopping Lin Li, Farshad Amini, Yi Pan, Saiyu Yuan, Bora Cetin, 2020-09-20 Earthen levees are extensively used to protect the population and infrastructure from periodic floods and high water due to storm surges The causes of failure of levees include overtopping surface erosion internal erosion and slope instability Overtopping may occur during periods of flooding due to insufficient freeboard The most problematic situation involves the levee being overtopped by both surge and waves when the surge level exceeds the levee crest elevation with accompanying wave overtopping Overtopping of levees produces fast flowing turbulent water velocities on the landward side slope that can potentially damage the protective grass covering and expose the underlying soil to erosion If overtopping continues long enough the erosion may eventually result in loss of levee crest elevation and possibly breaching of the protective structure Hence protecting levees from erosion by surge overflow and wave overtopping is necessary to assure a viable and safe levee system This book presents a cutting edge approach to understanding overtopping hydraulics under negative free board of earthen levees and to the study of levee reinforcing methods Combining soil erosion test full scale laboratory overtopping hydraulics test and numerical modeling for the turbulent overtopping hydraulics It provides an analysis that integrates the mechanical and hydraulic processes governing levee overtopping occurrences and engineering approaches to reinforce overtopped levees Topics covered surge overflow wave overtopping and their combination full scale hydraulic tests erosion tests overtopping hydraulics overtopping discharge and turbulent analysis This is an invaluable resource for graduate students and researchers working on levee design water resource engineering hydraulic engineering and coastal engineering and for professionals in the field of civil and environmental engineering and natural hazard analysis
