Promoting Mental Health at Work: New Insights and Practical Implications Elisabeth Schramm, Claas Lahmann, Christine Allwang, Kai G. Kahl, Undine E. Lang, 2021-09-14 *Policy and Practice Challenges for Equality in Education* Neimann, Theresa, Felix, Jonathan J., Shliakhovchuk, Elena, Hindman, Lynne L., 2021-09-10 Well educated populations are important aspects of any contemporary society as education increases national and global development and the positive expansion of communities to participate actively in civil matters also increases Educational equality is based on the principles of administrative competence and fairness of access and distribution of

resources opportunities and treatment which ensures success for every person Ensuring equal access to quality education requires addressing a wide range of persistent inequalities in society and includes a stronger focus on how different forms of inequalities intersect to produce unequal opportunities or outcomes that affect marginalized and vulnerable groups Policy and Practice Challenges for Equality in Education takes a multifaceted look at issues of equality and inequality in education as related to policy practice resource access and distribution As such this book explores the potential practices in education that serve to mitigate and transform unproductive practices which have left societies scarred by social and educational inequalities The chapters provide a critical analysis of the manifestations of inequalities in various educational contexts and discerns how broader social inequalities are informed by education related matters This book is ideal for sociologists administrators instructors policymakers data scientists community leaders practitioners stakeholders researchers academicians and students interested in educational equality and the unique challenges being faced worldwide

Moore, Sukhvinder Obhi, 2015-07-24 The sense of agency is defined as the sense of oneself as the agent of one's own actions This also allows oneself to feel distinct from others and contributes to the subjective phenomenon of self consciousness

Gallagher 2000 Distinguishing oneself from others is arguably one of the most important functions of the human brain. Even minor impairments in this ability profoundly affect the individual's functioning in society as demonstrated by psychiatric and neurological syndromes involving agency disturbances (Della Sala et al 1991, Franck et al 2001, Frith 2005, Sirigu et al 1999). But the sense of agency also plays a role for cultural and religious phenomena such as voodoo superstition and gambling in which individuals experience subjective control over objectively uncontrollable entities (Wegner 2003). Furthermore, it plays into ethical and law questions concerning responsibility and guilt. For these reasons, a better understanding of the sense of agency has been important for neuroscientists, clinicians, philosophers of mind, and the general society alike. Significant progress has been made in this regard. For example, philosophical scrutiny has helped establish the conceptual boundaries of the sense of agency (Bayne 2011, Gallagher 2000, 2012, Pacherie 2008, Synofzik et al 2008) and scientific investigations have shed light on the neurocognitive basis of sense of agency, including the brain regions supporting sense of agency (Chambon et al 2013, David et al 2007, Farrer et al 2003, 2008, Spengler et al 2009, Tsakiris et al 2010, Yomogida et al 2010). Despite this progress, there remain a number of outstanding questions such as: Are there cross-cultural differences in the sense of agency? How does the sense of agency develop in infants or change across the lifespan? How does social context influence sense of agency? What neural networks support sense of agency, i.e. connectivity and communication between brain regions? What are the temporal dynamics with respect to neural processes underlying the sense of agency, i.e. the what and when of agency processing? How can different cue models of the sense of agency be further specified and empirically supported, especially with regards to cue integration weighting? What are the applications of sense of agency research clinically, engineering, etc? The concept of the sense of agency offers intriguing avenues for knowledge transfer across disciplines and interdisciplinary empirical approaches, especially in addressing the aforementioned outstanding questions. The aim of the present research topic is to promote and facilitate such interdisciplinarity for a better understanding of why and how we typically experience our own actions so naturally and undoubtedly as ours, and what goes awry when we do not. We thus welcome contributions from, for example, i) neuroscience and psychology including development psychology, neuroscience, ii) psychiatry and neurology, iii) philosophy, iv) robotics, and v) computational modeling. In addition to empirical or scientific studies of the sense of agency, we also encourage theoretical contributions including reviews, models, and opinions.

The Evolution of Rhythm Cognition: Timing in Music and Speech Andrea Ravignani, Henkjan Honing, Sonja A. Kotz, 2018-07-24. Human speech and music share a number of similarities and differences. One of the closest similarities is their temporal nature, as both i) develop over time, ii) form sequences of temporal intervals, possibly differing in duration and acoustical marking by different spectral properties which are perceived as a rhythm, and iii) generate metrical expectations. Human brains are particularly efficient in perceiving, producing, and processing fine rhythmic information in music and speech. However, a number of critical questions remain to be answered: Where does this human sensitivity for rhythm arise? How did rhythm cognition develop in human evolution? How

did environmental rhythms affect the evolution of brain rhythms Which rhythm specific neural circuits are shared between speech and music or even with other domains Evolutionary processes long time scales often prevent direct observation understanding the psychology of rhythm and its evolution requires a close fitting integration of different perspectives First empirical observations of music and speech in the field are contrasted and generate testable hypotheses Experiments exploring linguistic and musical rhythm are performed across sensory modalities ages and animal species to address questions about domain specificity development and an evolutionary path of rhythm Finally experimental insights are integrated via synthetic modeling generating testable predictions about brain oscillations underlying rhythm cognition and its evolution Our understanding of the cognitive neurobiological and evolutionary bases of rhythm is rapidly increasing However researchers in different fields often work on parallel potentially converging strands with little mutual awareness This research topic builds a bridge across several disciplines focusing on the cognitive neuroscience of rhythm as an evolutionary process It includes contributions encompassing although not limited to 1 developmental and comparative studies of rhythm e g critical acquisition periods innateness 2 evidence of rhythmic behavior in other species both spontaneous and in controlled experiments 3 comparisons of rhythm processing in music and speech e g behavioral experiments systems neuroscience perspectives on music speech networks 4 evidence on rhythm processing across modalities and domains 5 studies on rhythm in interaction and context social affective etc 6 mathematical and computational e g connectionist symbolic models of rhythmicity as an evolved behavior

Integrating Evolutionary Biology into Medical Education Jay Schulkin, Michael Power, 2019-12-19 Clinicians and scientists are increasingly recognising the importance of an evolutionary perspective in studying the aetiology prevention and treatment of human disease the growing prominence of genetics in medicine is further adding to the interest in evolutionary medicine In spite of this too few medical students or residents study evolution This book builds a compelling case for integrating evolutionary biology into undergraduate and postgraduate medical education as well as its intrinsic value to medicine Chapter by chapter the authors experts in anthropology biology ecology physiology public health and various disciplines of medicine present the rationale for clinically relevant evolutionary thinking They achieve this within the broader context of medicine but through the focused lens of maternal and child health with an emphasis on female reproduction and the early life biochemical immunological and microbial responses influenced by evolution The tightly woven and accessible narrative illustrates how a medical education that considers evolved traits can deepen our understanding of the complexities of the human body variability in health susceptibility to disease and ultimately help guide treatment prevention and public health policy However integrating evolutionary biology into medical education continues to face several roadblocks The medical curriculum is already replete with complex subjects and a long period of training The addition of an evolutionary perspective to this curriculum would certainly seem daunting and many medical educators express concern over potential controversy if evolution is introduced

into the curriculum of their schools Medical education urgently needs strategies and teaching aids to lower the barriers to incorporating evolution into medical training In summary this call to arms makes a strong case for incorporating evolutionary thinking early in medical training to help guide the types of critical questions physicians ask or should be asking It will be of relevance and use to evolutionary biologists physicians medical students and biomedical research scientists
