Pacing** Thomas Meyer, 2024-06-04 Advanced guidance for institutional investors academics and researchers on how to
manage a portfolio of private capital funds The Art of Commitment Pacing Engineering Allocations to Private Capital provides
a much needed analysis of the issues that face investors as they incorporate closed ended funds targeting illiquid private
assets such as private equity private debt infrastructure real estate into their portfolios These private capital funds once
considered alternative and viewed as experimental are becoming an increasingly standard component of institutional asset
allocations However many investors still follow management approaches that remain anchored in the portfolio theory for
liquid assets but that often lead to disappointing results when applied to portfolios of private capital funds where practically
investors remain committed over nearly a decade When planning for such commitments investment managers and
researchers are faced with practical questions such as How to measure and control the real exposure to private assets How
to forecast cash flows for commitments to private capital funds What ranges for their returns and lifetime are realistic and
how can the investor s skill be factored in Over which dimensions should a portfolio be diversified and how much
diversification is enough How can the impact of co investments or secondaries be modelled How to design pacing plans that
lead to resilient and efficient portfolios What stress scenarios should be considered and how can they be applied These are
just examples of the many questions for which answers are provided The Art of Commitment Pacing describes established
and new methodologies for building up and controlling allocations to such investments This book offers a systematic
approach for building up and controlling allocations to such investments The Art of Commitment Pacing is a valuable addition
