Vantage Quick-Reference Guide

Congratulations, and thank you for purchasing the Eyewitness Vantage Officer-Worn Camera from Kustom Signals. While Vantage offers a number of configurable features, actual operation is very simple. Once powered on, there are only three controls available, and just one, the prominent Record start/stop switch, that will be used frequently. This guide should provide everything you need to know to start using the camera.

Note that two options for configuring the cameras are available:

- 1) The camera has been shipped to you with the default configuration. (Defaults are listed on page 4). Check with your administrator for making changes to the configuration.
- 2) The second configuration option involves your agency pre-selecting the desired configuration. If this was done, your Vantage will have shipped pre-configured to your requirements.

Getting Started

- 1) Please charge your camera before the first use. A fully depleted standard battery requires 2 ½ hours to fully charge and will provide 4 ½-5 hours of record time. The extended battery option requires 4 hours to charge and provides up to 9 hours of record time.
- 2) Familiarize yourself with the controls and indicators detailed in this guide.
- 3) Please refer to your Agency's Administrator for the process you will use to download files into your database and for information on the configuration options.

Smith,2003 The Virginia Department of Transportation VDOT has made significant investments in the traffic monitoring infrastructure that supports intelligent transportation systems ITS The purpose of this infrastructure is to provide accurate real time information on the status of the transportation system thus it is critical that the monitoring infrastructure provide accurate data Although detectors are usually tested immediately after installation it is well known that they operate in a very harsh environment and thus are susceptible to degradation in accuracy and or complete failure Consequently a long term commitment to data quality assurance is required through maintenance data quality assessment testing and repair replacement The quality of data from ITS applications is becoming increasingly important as the data are more widely used Not only is the data used in real time operations but also in myriad other often more traditional transportation applications The purpose of this research project was to develop a procedure that VDOT could use to assess its ITS data quality The report includes a data quality assessment procedure that is based on theory practice and empirical investigation The procedure has the following key features benchmark data collection using temporary installation of non intrusive detectors data quality assessed at the lane level to pinpoint problem detectors data quality assessed at the 1 minute interval or minimum practical measurement interval level to provide sufficient quantities of data in reasonable periods of time analysis techniques including both measures and plots which provide quantitative and visual indications of data quality The authors recommend that VDOT begin to use the procedure on both an ad hoc basis and in a statewide program as a means of protecting its significant investment in ITS data collection **Catalog of Copyright Entries, Fourth Series** Library of Congress.
