(South Africa). Department of Education, 2014 **Accounting theories, practices, education and human capital formation trends**, 2025-09-15 This book aims to provide empirical and conceptual insights into contemporary accounting theories practices education and approaches adopted to advance human capital formation in the discipline Although new accounting practices have emerged in the modern world conceptual and empirical research that provides a holistic comprehensive understanding of these evolutions and human capital approaches used to promote capabilities formation in accounting remains scarce Contemporary research often focuses on developing a framework for integrating accounting practices while coverage of human capital development is limited Instead research strands on accountancy and human

capital are growing separately without a comprehensive empirical and conceptual framework for integrating the two concepts. Insights on accounting practices and human capital developments are necessary for building a holistic understanding of the two concepts and working towards adopting an interdisciplinary approach. The findings in this book seek to advocate for the need to develop highly skilled generations who may meet the requisite accounting and financial capabilities required in the modern global economy. This book adopts both conceptual and empirical methods to address the gap in the literature on the need for research that focuses on human capital formation in the accounting and finance discipline. It contributes an interdisciplinary perspective on the intersectionality between accounting practice and the human capital formation of individuals who possess the requisite knowledge.

Leadership Approaches to Negotiate Challenges in a Changing Education Landscape Leentjie van Jaarsveld, Kobus Mentz, Charl C. Wolhuter, 2020-12-31. The argumentative point of departure of this scholarly book is the common conviction of specialists in the field of education in South Africa that the national education system is not at a satisfactory level in both the academic and the public discourse. Such allegations are made and frequently stronger adjectives than non-satisfactory are used. Results of international test series in which South Africa has participated, such as the 2015 TIMSS tests, confirm the negative verdicts found in the public and scholarly discourse. This book aims to argue that although the lack of performance could be attributed to a multiplicity of factors, one factor that can make a difference in the achievement levels obtained by learners in schools is leadership. The book demonstrates that a particular problem of both the scholarly and the public discourse on education in South Africa is an overtone of defeatism or resignation, blaming all ills in the education system and educational institutions on historical

legacies and or contextual factors such as socio economic deprivation in the catchment areas of schools or poor resources and infrastructure This collected work was inspired by a recently published spate of articles on top performing schools including top performing schools in rural communities in which it was demonstrated that good leadership can overcome such contextual and other challenges The book unpacks the issue of leadership in South African schools from a variety of perspectives thus contributing to the development of the scholarly discourse on Educational Leadership in South Africa The target audience of the book is scholars of Educational Leadership The research reported in the chapters draw on a wide range of methodologies including empirical survey research questionnaires and interviews critical literature surveys and the comparative method
