**Engineering for Processes and Technologies** Azman Ismail, Muhamad Husaini Abu Bakar, Andreas Öchsner, 2019-01-14. This book presents various state of the art applications for the development of new materials and technologies, discussing computer based engineering tools that are widely used in simulations, evaluation of data, and design processes. For example, modern joining technologies can be used to fabricate new compound or composite materials, even those composed of dissimilar materials. Such materials are often exposed to harsh environments and must possess specific properties. Technologies in this context are mainly related to the transportation technologies in their wider sense, i.e. automotive and marine technologies, including ships, amphibious vehicles, docks, offshore structures, and robots. This book highlights the importance of the finite element and finite volume methods that are typically used in the context of engineering simulations.
