Bhatia, 2014-11-01 The prime requirement in respect of the indoor climate in a building is that room temperature should be at a comfortable level regardless of the weather conditions outside As soon as the ambient temperature is lower than the indoor temperature heat flows out from the building through its boundary surfaces the building envelope At the same time the building also loses heat through air infiltration i e the inward leakage of outdoor air into the building through gaps and

cavities in walls roofs doors and windows Bearing in mind the fact that the indoor temperature in most buildings is maintained at a little over 65 F this means throughout most of the year the building is losing heat to its surroundings This 5 hour course discusses the stepwise procedure to determine the rate of heat loss through building elements using a process called heat loss calculation You will learn how to extrapolate your calculation of a maximum hourly rate into an annual energy usage rate You will also learn some useful tips on saving heating energy The course includes one sample example for better understanding of the concept Learning ObjectiveAt the end of this course the reader will 1 Describe the factors affecting comfort in winter2 Describe the overall heat transfer coefficient U value and its relationship to resistance R value 3 Understand the basic equation of heat loss through floor slab and basement5 Understand the basic equation of heat loss through ventilation and infiltration6 Understand the concept of degree days and how it is used to estimate the annual heat loss 7 Understand the three basic modes of heat transfer conduction convection and radiation8 Understand the difference between the k values C values R values and U values 9 Learn by examples to calculate the series resistance and U values of a composite wall 10 Learn how to determine the infiltration and ventilation air flow rate 11 Understand by an example the detailed methodology to heat loss calculations12 Understand the basic terminology and definitions related to air conditioning load calculations
