

11. Vitreous fluid: The space between retina and eye lens is filled with a fluid called vitreous fluid. It keeps the eye wet. It is mainly composed of water. It occupies two-thirds of the volume of eye.

12. Blind spot: At the junction of the optic nerve and the retina, there are no sensory cells (rods or cones). So, no vision is possible at that spot. This is called the blind spot of the eye. Its existence can be demonstrated by the following activity:

ACTIVITY 5

To show the presence of blind spot of an eye

Things needed: A white cardboard, a scale and a pencil/pen

Method:

1. Take a white cardboard and mark a thick cross on its left hand side with the help of a pencil or pen. At a distance of 8 cm, mark a round mark on the right hand side (Fig. 16.20).

Fig. 16.20 A cardboard having a cross and a round mark on it

2. Hold the cardboard at arm's length from your eyes. Close your left eye and look continuously on the cross. You see that both cross and round marks are visible.
3. Move the cardboard slowly towards you, keeping the eye on the cross. You find at some point that round mark disappears. At this moment, the image of the round mark is formed on the blind spot and hence, it is not visible.
4. Again, hold the cardboard at an arm's length from your eyes. Now, close your right eye and look continuously on the round mark. You see that both cross and round marks are visible.
5. Move the cardboard slowly towards you, keeping the eye on the round mark. You find at some point, the cross mark disappears. At

this moment, image of the cross is formed on the blind spot on the retina that cannot send messages to the brain when light falls on it.

Conclusion: There is a blind spot on the retina where there are no sensory cells (rods or cones). So, no vision is possible at this spot.
