BIM Handbook Rafael Sacks, Charles Eastman, Ghang Lee, Paul Teicholz, 2018-07-03 Discover BIM: A better way to build better buildings. Building Information Modeling (BIM) offers a novel approach to design, construction and facility management in which a digital representation of the building product and process is used to facilitate the exchange and interoperability of information in digital format. BIM is beginning to change the way buildings look, the way they function and the ways in which they are designed and built. The BIM Handbook Third Edition provides an in-depth understanding of BIM technologies, the business and organizational issues associated with its implementation and the profound advantages that effective use of BIM can provide to all members of a project team. Updates to this edition include information on the ways in which professionals should use BIM to gain maximum value. New topics such as collaborative working, national and major construction clients, BIM standards and guides, a discussion on how various professional roles have expanded through the widespread use and the new avenues of BIM practices and services, a wealth of new case studies that clearly illustrate exactly how BIM is applied in a wide variety of conditions. Painting a colorful and thorough picture of the state of the art in building information modeling, the BIM Handbook Third Edition guides readers to successful implementations, helping them to avoid needless frustration and costs and take full advantage of this paradigm-shifting approach to construct better buildings that consume fewer materials and require less time, labor and capital resources.

The Software Encyclopedia 2000 Bowker Editorial Staff, 2000-05 [Proactive-reactive, robust scheduling and capacity planning of deconstruction projects under uncertainty](#) Volk, Rebekka, 2017-02-08 A project planning and decision support model is developed and applied to identify and reduce risk and uncertainty in deconstruction project planning. It allows calculating building inventories based on sensor information and construction standards and it computes robust project plans for different scenarios with multiple modes, constrained renewable resources and locations. A reactive and flexible planning element is

proposed in the case of schedule infeasibility during project execution
