Encouraging students to subscribe to proven causation rather than dramatic speculation the book Defines the often obscured difference between science and technology discussing how this confusion taints both common culture and academic rigor Explores the various philosophies of science demonstrating how errors in our understanding of scientific principles can adversely impact scientific awareness Exposes how pseudoscience and New Age mysticism advance unproven conjectures as dangerous alternatives to proven science Based on courses taught by the author for over 15 years this textbook has been developed to raise the scientific awareness of the untrained reader who lacks a technical or mathematical background To accomplish this the book lays the foundation of the laws that govern our universe in a nontechnical way emphasizing topics that excite the mind namely those taken from modern physics and exposing the abuses made of them by the New Age gurus and other mystagogues It outlines the methods developed by physicists for the scientific investigation of nature and contrasts them with those developed by the outsiders who claim to be the owners of scientific methodology Each chapter includes essays which use the material developed in that chapter to debunk misconceptions clarify the nature of science and explore the history of physics as it relates to the development of ideas Noting the damage incurred by confusing science and technology the book strives to help the reader to emphatically demarcate the two while clearly demonstrating that science is the only element capable of advancing technology
