

- Tighten the chain adjuster lock nuts and the axle nut.
- Rotate the rear wheel and sight along the drive chain from the rear to check wheel alignment.

- Insert a new cotter pin into the axle, and tighten the torque link nut.
- Check the rear brake pedal travel.

NOTE: In wet and muddy conditions, mud sticks to the chain and sprockets resulting in an overly tight chain. Such a condition may possibly cause the chain to break. To prevent such an occurrence, adjust the chain to 30~40 mm (1.2~1.6 in.) of slack whenever necessary.

4. Brakes

(1) Brake Lining Wear Indicator

On both the front and rear brake panels is a brake lining indicator. If an indicator points beyond wear lining wear indicator. If an indicator points beyond **USABLE RANGE** into the red zone when the brake is fully applied, the brake linings for that brake have worn past the service limit. In such case, the brake shoes must be replaced and the drum and other brake parts examined.

(2) Front Brake

The front brake is adjusted so that when the brake is fully applied there is 55~65 mm (2~2½ in.) of space left between the throttle grip and the end of the brake lever.

If the lever play is incorrect, first try adjusting the play at the brake lever.

- Loosen the lock nut at the front brake lever, turn the adjuster to obtain the proper amount of play, and tighten the lock nut.

If the adjuster at the brake lever has reached its limit, adjust the cable with the adjuster on the lower end of the cable.

- Loosen the lock nut at the front brake lever, screw the adjuster at the lever fully in, and tighten lock nut.
- Loosen the lock nut for the adjuster at the lower end of the cable, turn the adjuster to obtain the proper amount of play, and tighten the lock nut.

(3) Rear Brake

Adjust the rear brake cable with the cable adjuster on the rear brake panel so that the brake pedal has 20~30 mm (¾~1¼ in.) of travel from the rest position to the fully applied position.

NOTE: Since the brakes must always function for top braking performance, replace the shoes whenever the linings have worn down to ½ their original thickness.

The rear is brake adjusted so that the brake pedal has 20~30 mm (¾~1¼ in.) of travel from the rest position to the fully applied position.

- Turn the adjuster at the rear of the brake cable to obtain the proper amount of play.
