**TEFL Handbook**, 1985      **Digital Transformation** Emmanuel Monod, Yuewei Jiang, 2023-06-01 Whereas digital transformation considered from the standpoint of strategy suggests a direct link with business benefits, questions linger about the implementation of digital technologies that often result in a lack of return on investment. Many consulting trends adopt a technology-centered approach assuming that AI, IoT, data analytics, or robotics would lead to business performance. Yet most of the time organizational factors are neglected, especially hidden costs or hidden work. Moreover, unexpected consequences are overlooked such as resistance to change. Digital transformation is a practical problem for managers. Are IS implementation approaches such as agile methods to Socio-Technical Systems (STS) sufficient to tackle these issues? This book suggests starting from organizational transformation in essence independently from technology with methods such as Business Process Management (BPM), Socio-Economic Approaches to Management (SEAM), or Organizational Development (OD). Overall, whereas technology-centered approaches have been associated with numerous unintended consequences and failures with previous generations of technologies (e.g., ERP or KMS), process-centered and human-centered approaches may represent a less risky approach to digital transformation implementation. This volume focuses on evaluating the potential performance improvements and risks of digital transformation and ways to assess how technology may support work and organizational goals. Therefore, whereas written by both academics and practitioners, this book has been written for all managers in companies and institutions in order to help them achieve digital transformation success.

**Educational Digital Transformation: New Technological Challenges for Competence Development** Julio Cabero Almenara, Carmen Llorente Cejudo, Antonio Palacios-Rodríguez, 2023-10-09 The COVID-19 pandemic has provided a unique opportunity to examine our understanding of the opportunities and challenges that ICTs offer to support the functioning of all aspects of education. The closure of educational institutions has forced a radical change in the practices of teachers and societies regarding the use of ICT to support teaching, learning, social relations, and work in many sectors. In the training of digital skills, the instrumental mastery of ICT continues to outweigh the preparation of citizens to make constructive and safe use of technologies. After two decades of educational policies, we continue to reduce digital literacy to instrumental skills. That is, you do not learn why to use educational technologies and how or to be critical of their use. Education 4.0 seeks to develop and enhance the digital skills of students and teachers in digital teaching environments through the creation of a line of academic training programs for undergraduate, postgraduate, and continuing education. This article collection welcomes contributions to improve training policies and practices in Educational Digital Transformation for educational development strategies, activities, proposals for assessment, and certification of skills.
