Curriculum Focal Points for Prekindergarten through Grade 8 Mathematics

A Quest for Coherence

This is the third in a series of articles exploring the use of the 2006 National Council of Teachers of Mathematics (NCTM) publication, Curriculum Focal Points for Prekindergarten through Grade 8 Mathematics: A Quest for Coherence. The series introduction from NCTM President Skip Fennell, explaining what the Curriculum Focal Points are and why NCTM developed them, appeared in the December 2007/January 2008 issue of Teaching Children Mathematics (page 315). In subsequent TCM articles, the authors of the various grade bands discuss focal points for one or two grade levels. Because one principle of Curriculum Focal Points is that of cohesive curriculum, in which ideas develop across the grades, we encourage teachers of all grade levels to read the full series.

A first-grade teacher listened to two students "sharing" some crackers. "Come on!" said Josh. "You already had seven, and now you took five more!" The teacher asked both of them how many that would total. Josh answered, "Easy. Seven, eight, nine, ten, eleven, twelve." Marissa had a different way: "Five and five is ten; so take five, put it with the five, and two left. Twelve."

Curriculum Focal Points (NCTM 2006) defines the mathematics that every child should know and be able to do for each specific age or grade level addressed in the document. In this article, we discuss the Focal Points for first and second grade.

First-Grade Mathematics

In the domain of Number and Operations, children develop strategies for adding and subtracting whole numbers based on their experience working with small numbers in prekindergarten and kindergarten. For example, in those grades, children should have learned to accurately and efficiently count sets of objects as well as produce sets of a given number. Are they finished with counting then? No! First graders still need to develop a variety of counting skills and concepts.

In the opening vignette, Josh showed the ability to "count on." For many children, this skill begins with the ability to verbally count forward, and then backward, from any number. If this seems an easy skill to you, try to start at *J* and say the alphabet backward. It is not as easy as you thought it would be, is it? And we have known the alphabet for much longer than the few years that children have known numbers.

After learning to count on, children then learn to count to a certain number, such as "two more than seven." Again, test yourself *without* using numbers at all: What is *D* more than *J* in the alphabet?

Finally, children need to learn to use these abilities in quantitative situations. For example, if you count five marbles into a bag, then drop more in, can your students quickly tell you how many are in the bag? If not, start by repeatedly putting only one more in each time. Then ask them, "How many now?" Next, increase the number you put in the bag to two at a time, and so forth. Children can learn to count backward in much the same way. Perhaps surprisingly, counting on is often a better strategy for most children, even for subtraction.

Focal Points Grade 3:

Focus in Grades 3-5 Amy Mirra, 2008 *Focus in Grades 3-5* is part of a series that shows teachers how to incorporate NCTM's Curriculum Focal Points for PreK-8 into their current mathematics curricula. The book provides practical ideas, sample student work, and a sample state math curricula organized around the focal points. By focusing more intensely on fewer topics at each grade level, students gain a deeper understanding of mathematical ideas. This volume will help teachers think about what a focused curriculum means and how they might begin to build focus into their existing curricula. *Focus in Grade 3* Jane F. Schielack, 2009 The goal of each grade-specific book in the Teaching with Curriculum Focal Points series is to present the mathematics in each of the Focal Points in more detail. Follow an instructional progression from introducing and building concepts to developing depth of understanding to strengthening fluency. **Visible Thinking in the K-8 Mathematics Classroom** Ted H. Hull, Don S. Balka, Ruth Harbin Miles, 2011-01-21 The key to students' success in math lies in a way of teaching that provides clear evidence of how students are thinking about problems and builds on that thinking to take them to a deeper level of understanding. Seasoned math educators Ted Hull, Don Balka, and Ruth Harbin Miles offer teachers a sequential and developmental plan for integrating visual thinking into current classroom practices and gradually but steadily initiating successful instructional changes in mathematics. Their new book provides teachers with numerous sample problems and classroom scenarios showing successful teacher interventions at work and offers guidance on how teachers can adapt traditional problems to promote visible thinking in their own classrooms. *Helping Children Learn Mathematics, 5th Australian Edition* Robert Reys, Mary Lindquist, Diana V. Lambdin, Nancy L. Smith, Anna Rogers, Leicha Bragg, Audrey Cooke, Melissa Fanshawe, Mark Gronow, 2025-10-10 *Teaching Mathematics in Grades 6-12* Randall E. Groth, 2012-08-10 A journey into the vibrant and intriguing world of mathematics education. *Teaching Mathematics in Grades 6-12* explores how research in mathematics education can inform teaching practice in grades 6-12. The author shows secondary mathematics teachers the value of being a researcher in the classroom by constantly experimenting with methods for developing students' mathematical thinking and then connecting this research to practices that enhance students' understanding of the material. The chapters in Part I introduce secondary teachers to the field of mathematics education with cross-cutting issues that apply to teaching and learning in all mathematics content areas. The chapters in Part II are devoted to specific mathematics content strands and describe how students think about mathematical concepts. The goal of the text is to have secondary math teachers gain a deeper understanding of the types of mathematical knowledge their students bring to grade 6-12 classrooms and how students' thinking may develop in response to different teaching strategies.

Mathematics Worksheets Don't Grow Dendrites Marcia L. Tate, 2008-08-21 The author does a good job of describing the NCTM content standards and providing examples that incorporate recommendations from NCTM and other experts in the field on how best to deepen students' understanding of mathematics.
