tools are needed to help the learner to generalize from his/her concrete experiment in control technology as well as to evaluate its effect on the target skills. The contributions not only discuss epistemological controversies linked to such learning environments as control technology but also report on the state of the art and new developments in the field and present some stimulating ideas.

Federal Register, 2014 Handbook of Fermented Meat and Poultry Fidel Toldrá, Iciar Astiasarán, Joseph Sebranek, Regine Talon, 2014-10-27 Fermented meat products have been consumed for centuries in many different parts of the world and constitute one of the most important groups of food. Bacterial cultures are used in their manufacture to preserve the meat and confer particular textures and sensory attributes. Examples of fermented meats include salami, chorizo, pepperoni, and saucisson. This fully revised and expanded reference book on meat fermentation presents all the principle fermented meat products and the processing technologies currently used in their manufacture. The 54 chapters of this substantial book are grouped into the following sections: Meat fermentation worldwide overview; production and principles; Raw materials; Microbiology and starter cultures for meat fermentation; Sensory attributes; Product categories; general considerations; Semidry fermented sausages; Dry fermented sausages; Other fermented meats and poultry; Ripened meat products; Biological and chemical safety of fermented meat products; Processing sanitation and quality assurance. There are five new chapters in the second edition that address the following topics: Smoking and new smoke flavourings; Probiotics; Methodologies for the study of the microbial ecology in fermented sausages; Low sodium in meat products and Asian sausages. Handbook of Fermented Meat and Poultry Second Edition provides readers with a full overview of meat fermentation: the role of microorganisms naturally present and/or added as starter cultures; safety aspects; and an account of the main chemical, biochemical, physical, and microbiological changes that occur in processing and how they affect final quality. Finally, readers will find the main types of worldwide fermented meat products typically produced in different areas with the description of their main characteristics.

Food Safety for Farmers Markets: A Guide to Enhancing Safety of Local Foods Judy A. Harrison, 2017-10-20 This book describes practices used on farms and in farmers markets selling foods directly to consumers in U.S. and international markets. It identifies hazards associated with those practices that could put consumers at increased risk for foodborne illness. It also provides tools for identifying hazards on farms and in markets and guidance for establishing food safe markets. The local food movement inspired by initiatives such as the USDA's Know Your Farmer, Know Your Food, Farm to School, Farm to Pre-school, and The People's Garden is sweeping the country. Nowhere is this interest more evident than at farmers markets. The number of farmers markets has increased almost 400% since the early 1990s with over 8,600 farmers markets listed in the USDA's market directory in 2016. Many of the customers for local markets are senior adults, people who may have health concerns, and mothers with young children shopping for foods they perceive to be healthier and safer than those available in grocery stores. This means that many of the customers may be in population groups that are most at risk for foodborne illness and the serious complications that can result. In surveys

however farmers selling directly to consumers self reported practices that could increase risk for foodborne illnesses These included use of raw manure as fertilizer without appropriate waiting periods between application and harvest as outlined in the National Organic Program a lack of sanitation training for farm workers handling produce a lack of proper cleaning and sanitizing of surfaces that come in contact with produce and use of untested surface water for rinsing produce before taking it to market Surveys of market managers found that many had limited experience and most had no food safety plans for their markets Observational studies in markets have corroborated self reported practices that could increase foodborne illness risks including lack of handwashing lack of access to well maintained toilet and handwashing facilities use of materials that cannot be cleaned and sanitized appropriately and lack of temperature control for foods that must have time and temperature controlled for safety These potential food safety risks are not only seen in U S farmers markets but also have been identified in international markets This book is unique in that it provides evidence based information about food safety hazards and potential risks associated with farmers markets It presents an overview of farm and market practices and offers guidance for enhancing food safety on farms and in markets for educators farmers producers vendors and market managers Dr Judy A Harrison is a Professor in the Department of Foods and Nutrition at the University of Georgia UGA where she has been named a Walter Bernard Hill Fellow for distinguished achievement in public service and outreach Serving as a food safety specialist for UGA Cooperative Extension she has provided 25 years of food safety education for a variety of audiences across the food system
