The related calls can be coded in programs to gain insights into critical applications running on HP NonStop Tandem systems. This investigation enables users to plan for the infrastructure growth as required.

Test software can be used to measure current response times of programs running on IBM i/OS for z and test transactions, the use of resources, amount of MQ messages and DB2 calls.

Based on further investigations, a product similar to AAP - *Application Performance Analyzer* - exists on the IBM platform.
