

**Chapter 6 Lab****Evidence of Evolution****Ask Questions**

What kinds of evidence support common ancestry and biological evolution?

Introduction

Scientists apply evolutionary theory to different types of evidence to explore how species are related to one another. They might study fossils to identify similarities among extinct species and living ones. They might look for evolutionary relationships among living species by comparing anatomy, both in embryos and adult organisms, or by comparing genes and proteins. Biogeography, which is the study of the geographic distribution of species, can also provide clues to common ancestry.

In this lab, you will be investigating several types of evidence for evolution. Your goal is to determine the most likely evolutionary relationship between four living species.
