Moore, Harvard University. Laboratory for Computer Graphics and Spatial Analysis, 1980 Engineering Secure Software and Systems Fabio MASSACCI, Dan Wallach, Nicola Zannone, 2010-01-25 It is our pleasure to welcome you to the proceedings of the Second International Symposium on Engineering Secure Software and Systems This unique event aimed at bringing together researchers from software engineering and security engineering which might help to unite and further develop the two communities in this and future editions The parallel technical sponsorships from the ACM SIGSAC the ACM interest group in security and ACM SIGSOFT the ACM interest group in software engineering is a clear sign of the importance of this interdisciplinary research area and its potential The difficulty of building secure software systems is no longer focused on mastering security technology such as cryptography or access control models Other important factors include the complexity of modern networked software systems the unpredictability of practical development life cycles the intertwining of and trade off between functionality security and other qualities the difficulty of dealing with human factors and so forth Over the last years an entire research domain has been building up around these problems The conference program included two major keynotes from Andy Gordon Microsoft Research Cambridge on the practical verification of security protocols implementation and Angela Sasse University College London on security usability and an interesting blend of research industry and idea papers **Soil Water Deficit and Physiological Issues in Plants** Amitav Bhattacharya, 2021-02-25 This book explores the

impact of soil water deficiency on various aspects of physiological processes in plants The book explains the effects under soil water deficit condition such as lowering of plant water content disturbance in carbon metabolism such in photosynthesis photorespiration and respiration as well as effects of soil water deficit on nitrogen metabolism The book also educates the

readers about mineral nutrition under soil water deficit condition and roles of different nutrient to overcome water deficit. Changes in growth and development pattern of plant under soil water deficit condition and effects on growth and development are elaborated. This book is of interest to teachers, researchers, scientists in botany and agriculture. Also, the book serves as additional reading material for undergraduate and graduate students of agriculture, forestry, ecology, soil science, and environmental sciences. National and international agricultural scientists, policy makers will also find this to be a useful read. The in-depth description of the major physiological issues in plants under soil water deficit that are presented in this book will help breeders tailor crops for desirable physiological survival traits in the face of increasing soil water deficit. This book is an impactful addition to the library of any faculty members, researchers, agricultural policy planner, post graduate or student studying in plant physiology, biochemistry, microbiology, and other subjects related to crop husbandry.

Sensors in Agriculture Dimitrios Moshou, 2019-06-12 Agriculture requires technical solutions for increasing production while lessening environmental impact by reducing the application of agro-chemicals and increasing the use of environmentally friendly management practices. A benefit of this is the reduction of production costs. Sensor technologies produce tools to achieve the abovementioned goals. The explosive technological advances and developments in recent years have enormously facilitated the attainment of these objectives, removing many barriers for their implementation, including the reservations expressed by farmers. Precision agriculture and smart farming are emerging areas where sensor-based technologies play an important role. Farmers, researchers, and technical manufacturers are joining their efforts to find efficient solutions, improvements in production, and reductions in costs. This book brings together recent research and developments concerning novel sensors and their applications in agriculture. Sensors in agriculture are based on the requirements of farmers according to the farming operations that need to be addressed.

Clinical Biochemistry of Domestic Animals Jiro J. Kaneko, John W. Harvey, Michael Bruss, 1997 This updated and expanded Fifth Edition of Clinical Biochemistry of Domestic Animals brings together in a single comprehensive volume all the pertinent information regarding the biochemistry of disease and non-disease states in animals. Clinical veterinarians and animal scientists now routinely use many of the same diagnostic and therapeutic tools used to identify and treat diseases and metabolic disorders in humans, making this book an indispensable teaching, learning, and application resource for anyone engaged in the care, health, and welfare of animals. This book concentrates on the various rationales and interpretations regarding the biochemistry of disease in animals. It includes newly updated chapters with current references and new chapters on clinical toxicology and avian clinical biochemistry.

The Growing Role of Immunotherapy and Combination Strategies in Pancreatic and Hepatobiliary Cancers Arsen Osipov, Andrew Eugene Hendifar, Jose M. Ramia, Nuno Miguel Reis Couto, 2025-08-08 Pancreatic and hepatobiliary cancers including hepatocellular carcinoma HCC cholangiocarcinoma and gallbladder carcinoma are lethal malignancies with a high mortality rate a poor survival rate and a poor prognosis Both have seen an increase in their incidence worldwide with a significant increment in the impact on the different health systems Nowadays potential curative treatments are based on surgical resection combined with adjuvant systemic chemotherapy However there is a high recurrence rate and many patients are typically diagnosed at advanced stages causing further challenges Therefore there is significant research exploring alternative strategies to improve the survival rate of patients Immunotherapy for pancreatic and hepatobiliary cancers is a promising alternative therapeutic approach that is currently being highly explored Although the previous applications of immunotherapies with checkpoint inhibitors had poor results in pancreatobiliary tumors a better understanding of the interactions between the immune system present on the tumour microenvironment and the tumour itself is of outstanding interest to improve the results of the available immune treatments Also this knowledge will increase the possibility of developing other approaches vaccine developments with different technologies like the application of neo antigens or miRNA bispecific antibodies cell therapies or combinations of these different approaches including the association of immune treatment with chemotherapy
