

Model 8096 shown with optional equipment

### GENERAL DESCRIPTION

The Lab-Volt Radar Training System consists of seven subsystems (Models 8096-1 to 8096-8). Subsystems 8096-1 to 8096-3 provide students with hands-on training in the principles and operation of analog and digital radar, as well as radar tracking systems. Subsystem 8096-4 adds an active jamming pod trainer to the system to train students in the principles and scenarios of Electronic Warfare (EW). Subsystem 8096-5 is a sophisticated pulse-mode, radar cross-section (RCS) measurement training system with inverse synthetic-aperture radar (ISAR) imagery capability that is specifically designed for operation at close range. Subsystem 8096-6 provides students with training in the principles of electronically steered antennas. Finally, subsystem 8096-8 introduces students to the basic principles and operation of synthetic aperture radar (SAR).

The Radar Training System uses patented technology to detect and track passive targets at very short range in the presence of noise and clutter. The very low transmitter power allows for safe operation in a variety of training environments.

### Radar Training System Features

- Active, real-time radar system operating in a classroom laboratory
- Low power, safe operation
- Latest technology, e.g., microstrips, Surface Mounted Devices (SMD's), Digital Signal Processing (DSP), and Fast Fourier Transform (FFT)
- Pulsed, continuous wave (CW), Doppler, and frequency-modulated continuous wave (FM-CW) modes of operation
- A-scope display output
- Plan Position Indicator (PPI) display on a computer monitor (on-screen PPI display) with fixed-intensity, intensity-modulated, color-modulated, and color-coded (weather radar) display modes
- Conventional PPI display capability (vector scan output)
- Moving Target Indication (MTI) processor for fixed-target echo cancellation and clutter rejection
- Sensitive Moving Target Detection (MTD) processor that differentiates between fixed and slowly moving targets at short range

Craig,2012-12-06 To the Instructor The purpose of this laboratory manual is not just to help students to set up electronic circuits that function as they should The important thing is the electronic concepts that the student learns in the process of setting up and studying these circuits Quite often a student learns more electronics when he has to trouble shoot a circuit than when the circuit performs as it should when first built It is unlikely that any students would be able to complete all of these experiments in one semester The author believes that all students should have laboratory experiences with power supplies amplifiers oscillators and integrated circuits

Additional laboratory experiments should be determined by the instructor Therefore you can choose those that you want done Some students are more efficient in the laboratory than others Therefore some would be able to complete more experiments in a semester than others Also many of these experiments cannot be completed in one two hour laboratory period If space is available the circuits could be left intact from one period to the next Or you might want to select steps in an experiment that you want to delete Neither the values of the components or the magnitudes of the power supplies as given in the instructions are critical Therefore you could in most cases change them if the ones recommended are not available *Dynamo*
