**Forest Monitoring**, 2013-03-16. The demand for comparable long-term, high-quality data on forest ecosystems' status and changes is increasing at the international and global level. Yet sources for such data are limited, and in many cases it is not possible to compare data from different monitoring initiatives across space and time because of methodological differences. Apart from technical manuals, there is no comprehensive, multidisciplinary, scientific, peer-reviewed reference for forest monitoring methods that can serve and support the user community. This book provides, in a single reference, the state of the art of monitoring methods as applied at the international level. The book presents scientific concepts and methods that form the basis of the transnational long-term forest monitoring in Europe and looks at other initiatives at the global level. Standardized methods that have been developed over two decades in international forest monitoring projects are presented. Emphasis is put on transnationally harmonized methods, related data quality issues, current achievements, and on remaining open questions. A comprehensive overview of needs, requirements, organization, and possible outcomes of an integrated monitoring program. Tested and quality assured internationally.
