Mathematics and Physics of Emerging Biomedical Imaging Committee on the Mathematics and Physics of Emerging Dynamic Biomedical Imaging, Commission on Physical Sciences, Mathematics, and Applications, Division on Engineering and Physical Sciences, National Research Council, 1996-03-13 This cross disciplinary book documents the key research challenges in the mathematical sciences and physics that could enable the economical development of novel biomedical imaging devices It is hoped that the infusion of new insights from mathematical scientists and physicists will accelerate progress in imaging Incorporating input from dozens of biomedical researchers who described what they perceived as key open problems of imaging that are amenable to attack by mathematical scientists and physicists this book introduces the frontiers of biomedical imaging especially the imaging of dynamic physiological functions to the educated nonspecialist Ten imaging modalities are covered from the well established e g CAT scanning MRI to the more speculative e g electrical and magnetic source imaging For each modality mathematics and physics research challenges are identified and a short list of suggested reading offered Two additional chapters offer visions of the next generation of surgical and interventional techniques and of image processing A final chapter provides an overview of mathematical issues that cut across the various modalities

Handbook of Mathematical Models in Computer Vision Nikos Paragios, Yunmei Chen, Olivier D. Faugeras, 2006-01-16 Abstract Biological vision is a rather fascinating domain of research Scientists of various origins like biology medicine neurophysiology engineering mathematics etc aim to understand the processes leading to visual perception process and at reproducing such systems Understanding the environment is most of the time done through visual perception which appears to be one of the most fundamental sensory abilities in humans and therefore a significant amount of research effort has been dedicated towards modelling and reproducing human visual abilities Mathematical methods play a central role in this endeavour Introduction David Marr's theory v

as a pioneering step towards understanding visual perception. In his view, human vision was based on a complete surface reconstruction of the environment that was then used to address visual subtasks. This approach was proven to be insufficient by neurobiologists, and complementary ideas from statistical pattern recognition and artificial intelligence were introduced to better address the visual perception problem. In this framework, visual perception is represented by a set of actions and rules connecting these actions. The emerging concept of active vision consists of a selective visual perception paradigm that is basically equivalent to recovering from the environment the minimal piece of information required to address a particular task of interest.
