

Notes

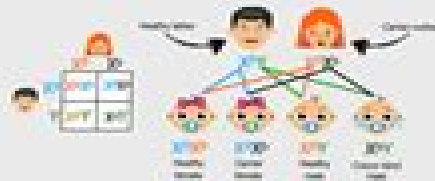

5.4 Pedigree Diagrams

- Pedigrees are genetic pedigree diagrams that show the inheritance of a trait in a group of related individuals
- The diagram below shows the inheritance of cystic fibrosis. The highlighted individuals suffer from the disease

5.5 Sex-linked Traits

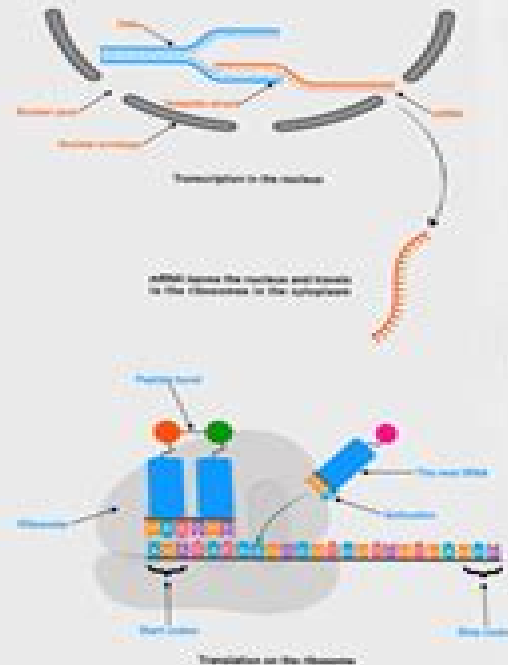

- It was first identified in the case that results from an allele that is located on a sex chromosome
- In humans, females have two X chromosomes (XX) while males have X and Y chromosomes (XY)
- The Y chromosome is much smaller than the X, and therefore it has fewer genes
- Therefore, most sex-linked characteristics are found on the X chromosome
- Many of the 171 genes on the X chromosome can only have one allele of the sex-linked characteristic
- Males have a 50% chance of having recessive sex-linked disorders
- Red-green colour blindness in humans is an example of a recessive sex-linked disorder
- Only males can be colour-blind (heterozygous) of this type of disease
- Based on this, two healthy parents can have a son with red-green colour blindness if he must have a carrier

5.6 Genetic Screening

- Genetic screening** the analysis of a person's DNA to check for the presence of any faulty allele
- Genetic screening programs must meet the following requirements to be successful:
 - 1. **Prevalence** (How often path. organism occurs) 2. **Veracity** (Is the test accurate) 3. **Privacy** (Can results be shared)
- Genetic screening can be done to adults, embryos in the uterus (blastocyst) or to embryos produced by IVF
- IVF is the process of fertilisation where an egg is fertilised with a sperm outside the body, in a test tube

PROTEIN SYNTHESIS SUMMARY

May 2012 Igcse Biology Edexcel Mark Scheme

Iseb Iseb

A decorative graphic element consisting of a light blue horizontal bar with a rounded right end, and a red circular shape partially visible behind it.
