An **air track** is a device that helps scientists study motion. Air comes out of holes in the track, allowing the gliders to move with minimal friction.

1. On the Air Track Gizmo, click **Play** (▶) to view a collision between the two gliders. What do you see?

I noticed that the two gliders hit each other and then they bounce back the way they came from.

2. Click **Reset** (↺). The **velocity** (v) of an object describes its speed and direction. The velocity of each glider is indicated next to the v_1 and v_2 sliders. Click **Play**, and then click **Pause** (⏸) just before the collision.

- A. What is the velocity of **Glider 1**?
B. In which direction does **Glider 1** move?

Sidewinder Ron Westrum, 2013-08-15 In the mid 1950s a small group of overworked underpaid scientists and engineers on a remote base in the Mojave Desert developed a weapon no one had asked for but everyone in the weapons industry desired This is the story of how that unorthodox team led by visionary Bill McLean overcame U.S. Navy bureaucracy and other more heavily funded projects to develop the world's best air-to-air missile Author Ron Westrum examines that special time and place when the old American work ethic and can-do spirit were a vital part of U.S. weapons development to discover how this dedicated team was able to create a simple and inexpensive missile Today many decades after its invention the Sidewinder missile is still considered one of the best that America has to offer In a time of billion-dollar weapons development contracts astronomical cost overruns and defense acquisitions scandals this revealing highly readable tale about one of the most successful weapons in history should be of interest to anyone concerned with national security
