

Name: Date: Student Expectations - Objective

Students will understand the relationship between the structure of a cell and its function, and how this relationship changes as the cell matures.

Understanding: cell structure, organelles, cytoplasm, nucleus, cytoskeleton, membrane, vacuole, cell wall.

Three Knowledge Questions (Are these BSCPE concepts covered?)

1. Suppose you were trapped in a sealed flask of water outside of Earth's water. Would you be able to survive? Explain why or why not.

2. What do you think would happen if you released your freshwater cell in salt water?

Three Reasoning

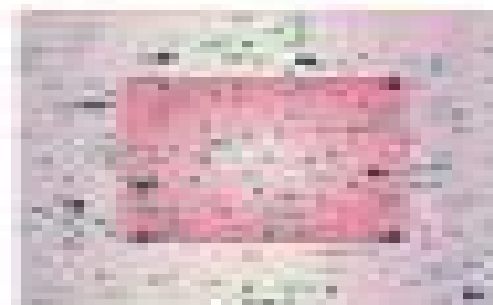

1. **Cell Structure** is a term that describes the internal parts of a cell, such as the **cytoplasm**, which means that small particles pass through the cytoplasm easily without any barrier.

The **Cell Membrane** is a thin layer that separates the cell from its environment. It is made of **phospholipids** and **proteins**. It is **selectively permeable**, meaning it allows some substances to pass through but not others. (10)

2. Which particles can pass through the cell membrane?

3. Which particles cannot pass through the cell membrane?

4. How does the cell membrane work? Explain how you think about the size of the cell.
