

Oversight Role of the Independent Monitoring Board of the Global Polio Eradication Initiative

Paul D. Rutter and Liam J. Donaldson

Independent Monitoring Board of the Global Polio Eradication Initiative, London, United Kingdom

The Global Polio Eradication Initiative (GPEI) established its Independent Monitoring Board (IMB) in 2010 to monitor and guide its progress toward stopping polio transmission globally. The concept of an IMB is innovative, with no clear analogue in the history of the GPEI or in any other global health program. The IMB meets with senior program officials every 3–6 months. Its reports provide analysis and recommendations about individual polio-affected countries. The IMB also examines issues affecting the global program as a whole. Its areas of focus have included escalating the level of priority afforded to polio eradication (particularly by recommending a World Health Assembly resolution to declare polio eradication a programmatic emergency, which was enacted in May 2012), placing greater emphasis on people factors in the delivery of the program, encouraging innovation, strengthening focus on the small number of so-called sanctuaries where polio persists, and continuous quality improvement to reach every missed child with vaccination. The IMB's true independence from the agencies and countries delivering the program has enabled it to raise difficult issues that others cannot. Other global health programs might benefit from establishing similar independent monitoring mechanisms.

Keywords: polio eradication; program governance; monitoring.

The establishment of the Independent Monitoring Board (IMB) of the Global Polio Eradication Initiative in November 2010 was a novel development for the GPEI and an innovation in global health program governance. Throughout its 25-year history, the GPEI has established (and disbanded) a number of boards, advisory groups, and committees to provide expertise and advice to the program. The IMB is the first truly independent group charged with assessing the program's progress, strengths, and weaknesses [1].

The IMB was established at a critical time for the GPEI. Founded in 1988, the GPEI achieved substantial progress over its first 12 years, reducing the global

incidence of polio by 99%. A difficult decade followed, in which the incidence of polio remained stubbornly unchanged despite considerable effort and investment. At the end of that decade, in 2010, the program resolved to break the deadlock and to finally complete eradication. Establishing the IMB was part of its plan to do so [2]. This article describes the work of this unique group to date.

IMB CHARACTERISTICS

Structure, Operation, and Functions

The IMB consists of 9 members, each of whom is a public health or communications expert [3]. Some had close prior knowledge of the GPEI, but the majority did not. The IMB's small secretariat is entirely independent of the GPEI agencies. Every other GPEI committee or board, current and historical, has involved program staff within the group or a partner agency acting as secretariat to the group, or both. The IMB's crucial difference is its absolute independence and freedom from
