Title: War Neurosis and the Great War

Historical Question: Why did the Great War fuel the study of psychological trauma and illness? ([Read below how to develop a good historical question.](#)) (This part is optional now, but have a thesis question by your first draft.)

Prior to the Great War, the desire to study war neurosis was nearly nonexistent. However, World War I brought the demand to understand soldiers' reactions to the destruction they witnessed. Why did the Great War fuel the study of psychological trauma and neurosis? To answer this question, one must understand the development of war trauma research. Doctors had primitive views of trauma. Most educated psychoanalysts attributed trauma to women. They felt that women were genetically prone to cases of hysteria. If men had shown signs of psychological illnesses, doctors assumed the men were feminine or weak. Therefore, society put a stigma on anyone deemed psychologically unfit. Since men were naturally tough, doctors also assumed that men should not show signs of weakness during or after a war. Yet, most doctors began to move away from this assumption after studying soldiers from the Russo-Japanese war. The Great War made military officials, politicians, and doctors realize that the brutality of war caused men to psychologically deteriorate. Soldiers had always to think about their survival, so this made them prone to constant stress and anxiety. In addition, soldiers faced new weaponry like tanks, poisonous gases, and more powerful and accurate artillery. Finally, the interest in war neurosis peaked when soldiers returned to society. Doctors were stunned by the emotionless men they analyzed. Only after many years, soldiers began to open up and relate their experiences of the war. Therefore, the study of war trauma evolved during the Great War because of the curiosity of doctors, the attempt to understand the new form of violence the war brought, and the fascination with the soldiers after their return to society.

The study of war neurosis is important because the knowledge is useful in understanding the experience soldiers went through on the battlefield. Upon returning home, soldiers had feelings of guilt, remorse, fear, hysteria, and hopelessness. World War I marked the transition of society moving away from glorifying war to a feeling of uncertainty and apprehension. Although general accounts from World War I outlined the hardships of war, observance of psychological conditions educated societies about the dangers of violence. Also, the literature at this time gave individuals the opportunity to read about the horrors the young men endured. Even today, studying literature or personal accounts from armed conflicts comes from the Great War. The most well known accounts of psychological suffering among soldiers are the accounts of Vietnam. The early work of doctors on the Great War helped the study of traumatic stress in Vietnam. Knowledge about war neurosis was limited prior to World War I, but perhaps society will understand future soldiers because of the pioneer work done during the Great War. Finally, war neurosis helps psychologists understand human emotions. By examining an individual during

Networks of Innovation Ilkka Tuomi,2002-11-07 Innovations are adopted when users integrate them in meaningful ways into existing social practices Histories of major technological innovations show that often the creative initiative of users and user communities becomes the determining factor in the evolution of particular innovations The evolutionary routes of the telephone the Internet the World Wide Web email and the Linux operating system all took their developers by surprise Articulation of these technologies as meaningful products and systems was made possible by innovative users and unintended resources Iterative and interactive models have replaced the traditional linear model of innovation during the last decade Yet heroic innovators and entrepreneurs unambiguous functionality of products and a focus on the up stream aspects of innovation still underlie much discussion on innovation intellectual property rights technology policy and product development Coherent conceptual theoretical and practical conclusions from research on knowledge creation theory of learning history of technology and the social basis of innovative change have rarely been made This book argues that innovation is about creating meaning that it is inherently social and is grounded in existing social practices To understand the social basis of innovation and technology development we have to move beyond the traditional product centric view on innovations Integrating concepts from several disciplinary perspectives and detailed analyses of the evolution

of Internet related innovations including packet switched computer networks World Wide Web and the Linux open source operating system the book develops foundations for a new theoretical and practical understanding of innovation For example it shows that innovative development can occur in two qualitatively different ways one based on evolving specialization and the other based on recombination of existing socially produced resources The expanding communication and collaboration networks have increased the importance of the recombinatory mode making mobility of resources sociotechnical translation mechanisms and meaning creation in communities of practice increasingly important for innovation research and product development
