Concepts Of Modern Physics: The Haifa Lectures Mendel Sachs, 2007-09-27 This book highlights foundational issues in theoretical physics in an informal open style of lecture. It expresses the flow of ideas in physics from the period of Galileo and Newton to the contemporary ideas of the quantum and relativity theories, astrophysics and cosmology as explanations for the laws of matter. Rather than presenting the ideas of physics as a fait accompli, the book leaves it up to the reader to decide which of these 20th century ideas in science will carry over to the 21st century for our further comprehension of the laws of nature in all domains from that of elementary particles to cosmology. It is the contention of the author that our future progress in physics comprehension will only take place when the foundational controversies between the quantum and relativity theories are recognized and discussion is given to their resolution. The book therefore presents an attitude not normally taken in other present day books on subjects in contemporary theoretical physics and cosmology. **Oskar Klein**

Memorial Lectures, The: 1988-1999 Gosta Ekspong, 2014-03-21 The Oskar Klein Memorial Lecture series has become a very successful tradition in Swedish physics since it started in 1988. Theoretical high energy physics dominates the subjects of the lectures, mirroring one of Klein's own main interests. This single volume is a compilation of the unique lectures previously produced in three separate volumes. The lectures are by world renowned experts in physics who have all contributed to the excitement of the field over the years. They continue to be of value to students and teachers alike.

Oskar Klein Memorial Lectures, The (Vol 2) Gosta Ekspong, 1994-04-02 The series of Oskar Klein Memorial Lectures is a must read for those keenly involved or simply interested in exploring the many fascinating aspects of Physics. This volume presents two landmark lectures given by Hans Bethe in October 1990 and Alan H Guth in June 1991 under the series of Oskar Klein Memorial Lectures. Hans Bethe's lectures dealt with two themes: the astrophysical importance of neutrinos in supernova outbursts and a theoretical account of neutrinos through observations of the neutrino flux from the centre of the sun. Anyone interested in understanding the processes involved in the collapse and explosion of a large star would certainly find this book enlightening. Alan H Guth's lecture dealt with the various aspects of the origin of the universe, a topic which never fails to intrigue. The originator of the inflation scenario for the Big Bang theory, Guth has included his latest observations on the COBE satellite and their theoretical interpretation in this lecture. Anyone wishing to grasp the essentials of these ideas will find in Guth's lecture a wealth of knowledge. This volume also presents for the first time in English the original derivation of the Klein-Nishina formula for Compton scattering and an account of the Klein Paradox. A special study reveals interesting facts on the collaboration between Oskar Klein and Yoshio Nishima in 1928 and further surprising facts on the treatment by the Nobel Committee for Physics of the prize to A H Compton in 1927. Some translated autobiographic texts have also been included to acquaint the reader with Klein's interest in cosmology and his attempts to find the driving force behind the expanding system of galaxies, what Klein termed the Meta galaxy. *Lectures on the Philosophy of*

Feynman Lectures On Gravitation Richard Feynman,Fernando Morinigo,2018-05-04 The Feynman Lectures on Gravitation are based on notes prepared during a course on gravitational physics that Richard Feynman taught at Caltech during the 1962 63 academic year For several years prior to these lectures Feynman thought long and hard about the fundamental problems in gravitational physics yet he published very little These lectures represent a useful record of his viewpoints and some of his insights into gravity and its application to cosmology superstars wormholes and gravitational waves at that particular time The lectures also contain a number of fascinating digressions and asides on the foundations of physics and other issues Characteristically Feynman took an untraditional non geometric approach to gravitation and general relativity based on the underlying quantum aspects of gravity Hence these lectures contain a unique pedagogical account of the development of Einstein's general theory of relativity as the inevitable result of the demand for a self consistent theory of a massless spin 2 field the graviton coupled to the energy momentum tensor of matter This approach also demonstrates the intimate and fundamental connection between gauge invariance and the principle of equivalence [The Essential Cosmic Perspective](#) Jeffrey O. in relativity cosmology and matter theories between the classical unified field theories and quantum physics from the perspective of a creative mind struggling against theories of nature restricted by the view of classical determinism In the second part of this volume a broad and detailed introduction is given to Weyl s work in the mathematical sciences in general and in philosophy It covers the whole range of Weyl s mathematical and physical interests real analysis complex function theory and Riemann surfaces elementary ergodic theory foundations of mathematics differential geometry general relativity Lie groups quantum mechanics and number theory
