Physics 101: Introductory Laboratory I, Section 4: Concurrent Forces

THEORY

In general, the net force applied to an object is the sum of all forces applied to it. If the net force is zero, the object will remain at rest. If the net force is non-zero, the object will accelerate in the direction of the net force.

When three concurrent forces are applied to an object, the net force is the sum of the three forces. If the net force is zero, the object will remain at rest. If the net force is non-zero, the object will accelerate in the direction of the net force.

The major goal of this lab is to understand the relationship between force and acceleration, and to understand the relationship between force and acceleration.
