psychotherapy research. A new look at process and outcome Sergio Salvatore,Wolfgang Tschacher,Omar Carlo
Gioacchino Gelo,Sabine C Koch,2016-04-11 In an attempt to cease from reducing the world and its emergent phenomena to
linear modeling and analytic dissection Dynamic Systems Theories DST and Embodiment theories and methods aim at
accounting for the complex dynamic and non linear phenomena that we constantly deal with in psychology For instance DST
and Embodiment can enrich psychology's understanding of the communicative process both in clinical and non clinical
settings In psychotherapy an important amount of research has shown that next to other ingredients the therapeutic
relationship is the most important active factor contributing to psychotherapy outcome These findings give communication a
central role in the psychotherapy process In the traditional view the underlying model of understanding psychotherapy
processes is that of a number of components summatively coming together enabling us to make a linear causal prediction Yet

communication is inherently dynamic A shift to viewing the communication process in psychotherapy as a field dynamic phenomenon helps us to take into account nonlinear phenomena such as feedback processes within and between persons We thus propose an embodied enactive dynamic systems view as a new theoretical and methodological perspective that can more realistically capture what happens among and between two persons in psychotherapy This view reaches beyond the current narrow model of psychotherapy research DST and Embodied Enactive Approaches can offer solutions to the loss of non linear phenomena the complex dynamics of reality and the holistic level of analysis DST and Embodied Enactive Approaches have developed not in a single discipline but in a joined movement based on various fields such as physics biology robotics anthropology philosophy linguistics neuroscience and psychology and have only recently entered clinical theorizing The two new paradigms have already triggered a rethinking of the therapeutic exchange by recognizing the embodied nature of psychological and communicative phenomena Their integration opens up a promising scenario in the field of psychotherapy research developing new profoundly transdisciplinary theoretical concepts methodologies and standards of knowledge The notion of field dynamics enables us to account for the role of the communicational context in the regulation of intra psychological processes while at the same time avoiding the pitfalls of an ontologization of the hierarchy of systemic organization Moreover the new approach implements methodological strategies that can transcend the conventional opposition between idiographic and nomothetic sciences

The major objective of a distributed system is to provide low cost availability of the resources of the system by localizing access and providing insulation against failures of individual components Since many users can be concurrently accessing the system it is essential that a distributed system also provide a high degree of concurrency Research into algorithms has been focused on concurrency consistency failure detection management of replicated copy and commitment and termination of transactions This book is a compilation of a subset of research contributions in the area of concurrency control and reliability in distributed systems with brief explorations of interesting areas including theoretical and experimental efforts
