Laboratory Guide to Biochemistry, Enzymology, and Protein Physical Chemistry Marc le Maire, Raymond Chabaud, Guy Hervé, 2012-12-06 The study of a single well chosen substance here aspartate transcarbamoylase can provide an excellent basis for a laboratory course The student is introduced to a variety of scientific ideas and to many experimental and interpretive techniques This enzyme is readily available is relatively stable has an extensive literature and its behavior has many facets substrate inhibition a large change in structure upon homotropic activation by substrates allosteric stimulation by ATP allosteric inhibition by CTP synergistic with VTP positive cooperativity for substrates negative cooperativity for CTP binding and dissociation and reassembly of subunits C and R2 from the holoenzyme CI 5 In addition 3 6 to the known biochemical aspects of these properties the results obtained here can be interpreted in the light of the high resolution X ray diffraction structures of the T and R forms the low angle X ray scattering results and the large number of mutants now available by recombinant DNA methods Future development of this course could also involve part of these methods as well as the carefully chosen experiments described here This approach resembles research more than the approaches one usually finds in biochemical laboratory courses A consistent development of ideas about a single enzyme which shows so many facets in its behavior is sure to hold the interest of the student Moreover one explores a depth and reasons to move forward that are an essential part of research

Discovery-Based Learning in the Life Sciences Kathleen M. Susman, 2015-09-28 For nearly a decade scientists educators and policy makers have issued a call to college biology professors to transform undergraduate life sciences education As a gateway science for many undergraduate students biology courses are crucial to addressing many of the challenges we face such as climate change sustainable food supply and fresh water and emerging public health issues While canned laboratories and cookbook approaches to college science education do teach students to operate equipment make accurate measurements and work well with numbers they do not teach students how to take a scientific approach to an area of interest about the natural world Science is more than just techniques measurements and facts science is critical thinking and interpretation which are essential to scientific research Discovery Based Learning in the Life Sciences presents a different way of organizing and developing biology teaching laboratories to promote both deep learning and understanding of core concepts while still teaching the creative process of science In eight chapters the text guides undergraduate instructors in creating their own discovery based experiments The first chapter introduces the text delving into the necessity of science education reform The chapters that follow address pedagogical goals and desired outcomes incorporating discovery based laboratory experiences realistic constraints on such lab experiments model scenarios and alternate ways to enhance student understanding The book concludes with a reflection on four imperatives in life science research climate food energy and health and how we can use these laboratory experiments to address them

Discovery Based Learning in the Life Sciences is an invaluable guide for undergraduate instructors in the life sciences aiming

to revamp their curriculum inspire their students and prepare them for careers as educated global citizens

Comprehensive Biophysics ,2012-04-12 Biophysics is a rapidly evolving interdisciplinary science that applies theories and methods of the physical sciences to questions of biology Biophysics encompasses many disciplines including physics chemistry mathematics biology biochemistry medicine pharmacology physiology and neuroscience and it is essential that scientists working in these varied fields are able to understand each other s research Comprehensive Biophysics Nine Volume Set will help bridge that communication gap Written by a team of researchers at the forefront of their respective fields under the guidance of Chief Editor Edward Egelman Comprehensive Biophysics Nine Volume Set provides definitive introductions to a broad array of topics uniting different areas of biophysics research from the physical techniques for studying macromolecular structure to protein folding muscle and molecular motors cell biophysics bioenergetics and more The result is this comprehensive scientific resource a valuable tool both for helping researchers come to grips quickly with material from related biophysics fields outside their areas of expertise and for reinforcing their existing knowledge

Biophysical research today encompasses many areas of biology These studies do not necessarily share a unique identifying factor This work unites the different areas of research and allows users regardless of their background to navigate through the most essential concepts with ease saving them time and vastly improving their understanding The field of biophysics counts several journals that are directly and indirectly concerned with the field There is no reference work that encompasses the entire field and unites the different areas of research through deep foundational reviews Comprehensive Biophysics fills this vacuum being a definitive work on biophysics It will help users apply context to the diverse journal literature offering and aid them in identifying areas for further research Chief Editor Edward Egelman E I C Biophysical Journal has assembled an impressive world class team of Volume Editors and Contributing Authors Each chapter has been painstakingly reviewed and checked for consistent high quality The result is an authoritative overview which ties the literature together and provides the user with a reliable background information and citation resource **Scientific and Technical Books and Serials in**

Structure and Mechanism in Protein Science Alan Fersht,1999 Includes four new chapters which focus on the repercussions of protein engineering for protein folding and catalysis this new edition is a more general guide to mechanism in protein science **Scientific and Technical Aerospace Reports** ,1991 [Aqueous-phase Catalytic Conversions of Renewable Feedstocks for Sustainable Biorefineries](#) Georgios Papadogianakis,Roger Arthur Sheldon,Yulong Wu ,Dmitry Yu. Murzin,2024-08-23 Today there is growing interest in aqueous phase catalytic conversions for the valorization of renewable biomass based feedstocks for biorefineries to produce in a sustainable way biofuels chemicals power energy materials pharmaceuticals and food This is because of the highly polar nature of water which makes it an ideal medium to convert polar biomass based lignocellulose cellulose hemicellulose lignin with high oxygen content and their upgraded products such as hydrophilic carbohydrates platform chemicals and their derivatives Another reason which makes water the solvent of choice is that water itself is involved either as a reagent or as a byproduct even in large amounts in typical conversions for the valorization of biomass The obtained intermediates further react in the aqueous medium often without any separation and purification to manufacture more valuable products This results in substantial energy savings lower emissions and economic benefits Furthermore water could act as a catalyst in conversions of biomass based feedstocks such as in liquefaction reactions under subcritical conditions Moreover novel types of catalytic reactivity have been observed in the aqueous solvent not only with water soluble transition metal catalytic complexes but also with conventional heterogeneous catalysts and catalytic nanoparticles in a broad spectrum of different reactions such as inter alia aldol condensations and hydrogenation reactions For example in the aqueous phase hydrogenation of the biomass based key platform chemical levulinic acid into valerolactone and beyond employing heterogeneous catalysts and nanoparticles the presence of water has a beneficial effect and accelerates the reaction rates whereas in organic solvents much lower activities were observed This promotional effect of water in the hydrogenation of levulinic acid was proved by many experimental and theoretical studies using a broad spectrum of different types of catalytic systems
