When asked to identify, describe and evaluate potential risks to the project, the students identified a number of challenges, including:

- **Time constraints:** The project was time-consuming, and the students had to balance it with their other academic and personal commitments.
- **Resource limitations:** The students had limited access to resources, such as equipment and materials, which could have impacted the quality of the project.
- **Communication challenges:** The students had to coordinate their efforts and communicate effectively, which could have been challenging given the remote nature of the project.

Overall, the students identified several risks to the project, but they also recognized the potential for learning and growth through the experience. They noted that the project provided them with valuable insights into the challenges of conducting research in a remote location and the importance of effective communication and resource management.

Abstract: The purpose of this study was to determine whether there were differences in the prevalence of dental caries between children who had been exposed to fluoride varnish and those who had not. A cross-sectional study was conducted in a public health center in São Paulo, Brazil. The sample consisted of 100 children aged 6-7 years. The children were divided into two groups: those who had been exposed to fluoride varnish and those who had not. The prevalence of dental caries was determined by examining the primary teeth. The results showed that the prevalence of dental caries was significantly lower in the group that had been exposed to fluoride varnish compared to the control group.

Connections James E. Katz, 2017-11-30 Perhaps no other technology has done so much to so many but been studied by so few as the telephone. Even as its physical size diminishes, the telephone is becoming more important. In *Connections*, now available in paperback, James E. Katz gives greater visibility to this important element in modern life. Katz examines how the telephone reveals gender relations in a way not predicted by feminist theories.

how it can be used to protect and invade personal privacy and how people harness telephone answering machines to their advantage Katz's inquiry reports on obscene phone calls the abuses of caller ID technology and attitudes toward voice mail National data about cellular telephones are presented to show the extent to which beepers and car phones have become status symbols Katz ranges from microsocial interaction to macrosocial theory and from the family and personal levels of organization to that of large scale industrial bureaucracies The result of this investigation is a compelling mosaic spanning sociology and psychology and organization and communication studies These arresting portraits will offer profound insight to historians students of American culture and those concerned about the nature and direction of the emerging information society
