**and Safety Traits in Horticultural Plants** Pei Xu,Xinchao Wang,Ferdinando Branca,2022-06-23     *Development of Circadian Clock Functions, volume II* Daisuke Ono,Takahiro J. Nakamura,Jeff Jones,Jihwan Myung,Rae Silver,2024-07-31 The temporal order of physiological functions such as sleep wakefulness is regulated by the circadian clock This intrinsic clock starts ticking in the embryo and matures during development with attenuation of the clock function in the elderly illustrated by attenuation of synchrony entrainment and outputs of cellular circadian rhythms in the SCN This age related diminution can contribute to the emergence of diseases such as sleep disorders infertility diabetes mental disorders etc Over the course of our lives a variety of internal and external factors are under the influence of the circadian clock This inherent developmental plasticity of the circadian system is critical for the establishment of normal bodily functions to adapt to the changing environment on earth In mammals the central circadian clock is located in the suprachiasmatic nucleus SCN of the hypothalamus Circadian rhythms in the SCN are observed during the embryonic period and input and output pathways from the SCN are formed after birth During postnatal development functions of neurotransmitters in the SCN are changed which have an influence on special temporal patterns of circadian rhythms in the SCN and outputs signals to the outside of the SCN During postnatal development properties of circadian rhythms in the SCN and its inputs and outputs can be modulated by environmental light conditions Recent optical manipulation and imaging techniques have revealed that cell type specific functions for circadian rhythms However it remains unclear which cell types or networks in the brain are modulated during postnatal development and how these cells regulate circadian rhythms depending on postnatal period     **Examining**

## **Plant Adaptations to Phosphate Deficiency** Alex

Joseph Valentine, Alejandra Zúñiga-Feest, Aleysia Kleinert, Pablo Cornejo, Vagner A. Benedito, 2021-05-18 Phosphate is an essential mineral to all plants and its availability in soils is an increasing challenge for agriculture. Phosphate is abundant in soils but its biological availability is often low due to the complexes that it forms with soil minerals and compounds. The biological availability of Phosphate is further reduced in acidic soils which represent approximately 40% of earth's arable agricultural lands. Agricultural systems compensate Phosphate deficiency with fertilizers coming from the mining of rock phosphate which is estimated to exhaust within the next 50 years. For these reasons, Phosphate limitations in natural and agricultural ecosystems is going to become a global problem and we urgently need to better understand how plants respond to Phosphate deficiency.

## **Beta-Catenin and Ha-ras - Master Regulators of Zonal Gene Expression in Mouse Liver?**

Albert Braeuning, 2008 Hepatocytes located in the periportal or perivenous regions of the liver lobule have different often complementary functions as indicated by differences in the content and activity of various enzymes of the intermediary and xenobiotic metabolism. The signaling molecules mediating this metabolic zonation however are largely unknown. Based on the correlation of marker protein expression between perivenous hepatocytes and Ctnnb1 encoding beta catenin mutated mouse hepatomas and between periportal hepatocytes and Ha ras mutated hepatomas a hypothesis was developed postulating that two opposing signals a Wnt signal maybe delivered by endothelial cells of the central veins activating a beta catenin dependent pathway and a second signal delivered by blood borne molecules activating Ras dependent downstream cascades regulate gene expression in hepatocytes from the periportal and perivenous domains of the liver lobule. The impact of beta catenin and Ras signaling on zonal gene expression was analyzed in vivo by use of different transgenic mouse strains. Zone specific physiological activation and antagonism of the two pathways were demonstrated. Transcriptome profiles of Ctnnb1 and Ha ras mutated tumors closely resembled those of perivenous and periportal hepatocytes. In vitro experiments with primary hepatocytes and hepatoma cells confirmed the role of beta catenin signaling in the induction of perivenous gene expression particularly of drug metabolizing enzymes. Inducibility of drug metabolizing enzymes by xenobiotics was demonstrated to be modulated by beta catenin in vitro and in vivo beta catenin thereby activated transcription by both direct beta catenin TCF dependent and indirect mechanisms. Serum components were shown to inhibit beta catenin mediated transcription and to induce the expression of periportal markers. Serum mediated inhibition of beta catenin signaling was not exclusively linked to Ras activation but also to the action of different ligand activated nuclear receptors thus suggesting a complex interplay of different blood borne molecules in the periportal repression of beta catenin signaling. In summary the results favor the hypothesis that gene expression patterns in periportal and perivenous hepatocytes are regulated at least in part by Ras and beta catenin dependent signaling pathways. In the perivenous areas of the liver lobule beta catenin seems to

act as a master regulator of both basal and inducible expression of enzymes involved in the metabolism of drugs and xenobiotics *Jasmonic Acid Pathway in Plants* Kenji Gomi, 2020-04-30 The plant hormone jasmonic acid JA and its derivative an amino acid conjugate of JA jasmonoyl isoleucine JA Ile are signaling compounds involved in the regulation of defense and development in plants The number of articles studying on JA has dramatically increased since the 1990s JA is recognized as a stress hormone that regulates the plant response to biotic stresses such as herbivore and pathogen attacks as well as abiotic stresses such as wounding and ultraviolet radiation Recent studies have remarkably progressed the understanding of the importance of JA in the life cycle of plants JA is directly involved in many physiological processes including stamen growth senescence and root growth JA regulates production of various metabolites such as phytoalexins and terpenoids Many regulatory proteins involved in JA signaling have been identified by screening for Arabidopsis mutants However much more remains to be learned about JA signaling in other plant species This Special Issue *Jasmonic Acid Pathway in Plants* contains 5 review and 15 research articles published by field experts These articles will help with understanding the crucial roles of JA in its response to the several environmental stresses and development in plants

Eric Schaller, 2022-02-03 *Plant Specialized Metabolisms: Physiological Responses and Molecular Mechanisms* Weiwei Zhang, Xiaomeng Liu, Feng Xu, Moonhyuk Kwon, 2025-08-07 Plant specialized metabolites are small molecules or organic compounds such as flavonoids quinones terpenoids alkaloids and phenolic compounds produced by plants They play a role in plant adaptation to the environment such as defending against predators and pests helping with pollination and providing protection against UV damage Some specialized metabolites also have certain physiological activities and pharmacological effects which are of great significance for the prevention and treatment of human tumors aging and cardiovascular diseases The distribution of specialized metabolites in plants is usually unique to species organs tissues and growth stages which leads to complex and diverse biosynthetic pathways of specialized metabolites The synthesis of plant specialized metabolites is controlled by genetic material and regulated by a variety of biotic and abiotic factors in the environment *Insights in Infectious Agents and Disease: 2022* Axel Cloeckeaert, 2024-07-18 We are now entering the third decade of the 21st Century and especially in the last years the achievements made by scientists in the field of Microbiology have been exceptional leading to major advancements Frontiers has organized a series of Research Topics to highlight the latest advancements in science in order to be at the forefront of science in different fields of research This specific editorial initiative led by Dr Axel Cloeckeaert is focused on new insights novel developments current challenges latest discoveries recent advances and future perspectives in the field The Research Topic solicits brief forward looking contributions from the editorial board members that describe the state of the art outlining recent developments and major achieved accomplishments future challenges and how to address those challenges to move the field forward Reviews Mini Reviews
