Debates in Mathematics Education Gwen Ineson, Hilary Povey, 2020-06-15 This new and updated second edition of *Debates in Mathematics Education* explores the major issues that mathematics teachers encounter in their daily lives. By engaging with established and contemporary debates, this volume promotes and supports critical reflection and aims to stimulate both novice and experienced teachers to reach informed judgements and argue their point of view with deeper theoretical knowledge and understanding. Divided into five accessible sections, this book investigates and offers fresh insight into topics of central importance in mathematics education, with this second edition including new discussions and chapters on Classic and contemporary issues of pedagogy, politics, philosophy and sociology of mathematics education. International comparisons of achievement, Digital technologies for teaching, Mastery in mathematics, Pop culture and mathematics, Whether mathematics can be harmful. Designed to stimulate discussion and support you in your own research, writing and practice through suggested questions and activities throughout. *Debates in Mathematics Education* will be a valuable resource for any student or practising teacher and those engaged in initial teacher education, continuing professional development or Master's level study. This book also has much to offer to those leading mathematics departments in schools and initial teacher education programmes and to beginning doctoral students looking for a survey of the field of mathematics education research.

Empowering Professional Teaching in Engineering John Heywood, 2022-05-31 Each one of us has views about education: how discipline should function, how individuals learn, how they should be motivated, what intelligence is, and the structures, content and subjects of the curriculum. Perhaps the most important beliefs that beginning teachers bring with them are their notions about what constitutes good teaching. The scholarship of teaching requires that beginning teachers should examine, evaluate these views in the light of knowledge currently available about the curriculum and instruction and decide their future actions on the basis of that analysis. Such evaluations are best undertaken when classrooms are treated as laboratories of inquiry, research where teachers establish what works best for them. Two instructor-centred and two learner-centred philosophies of knowledge, curriculum and instruction are used to discern the fundamental basic questions that engineering educators should answer in respect of their own beliefs and practice. They point to a series of classroom activities that will enable them to challenge their own beliefs and at the same time affirm, develop or change their philosophies of knowledge, curriculum and instruction.

Statistical Yearbook of Jamaica, 1977 *Curriculum Practice* Martyn Hammersley, Andy Hargreaves, 2012-05-04 When first published, this book was one of the first collections of empirical research in the area of the knowledge transmitted in schools and the responses of students to it. It includes studies of the histories of particular school subjects and of how the knowledge they embody is presented in the classroom. Attention is also given to the effects of gender stereotypes among teachers and pupils, both on pupils' selection of courses to study and on their reactions to particular subjects in the classroom. The other major topic in this collection is the way external examinations

shape the nature of the school curriculum and how it is taught There are studies of how pupils and teachers adapt to the exam system and of how that system and its role in the accountability of schools have changed in recent years The articles collected here throw into relief important aspects of what is taught in schools and they do this on the basis of a solid foundation of empirical research **The British National Bibliography** Arthur James Wells,1968 New Statesman
