

Bird Beak Lab

Background Information

The adaptation is a trait that helps an organism survive and reproduce. Beak shape and size is an example of an adaptation. As this lab goes, you will use three different adaptations and measure the bird's volume of capturing food. You will use materials such as clay, paper, straws, etc., and you will represent a type of bird beak. You will then use materials to pick up food as represented by beads/pills (seeds), peanuts (nuts), marshmallows (fruit) and beans (insects). The size represents the bird's stomach.

Identifying Adaptations In Birds Lab Key:

Physiological Adaptations for Breeding in Birds Tony D. Williams, 2012-08-05 *Physiological Adaptations for Breeding in Birds* is the most current and comprehensive account of research on avian reproduction. It develops two unique themes: the consideration of female avian reproductive physiology and ecology and an emphasis on individual variation in life history traits. Tony Williams investigates the physiological, metabolic, energetic, and hormonal mechanisms that underpin individual variation in the key female-specific reproductive traits and the trade-offs between these traits that determine variation in fitness. The core of the book deals with the avian reproductive cycle from seasonal gonadal development through egg laying and incubation to chick rearing. Reproduction is considered in the context of the annual cycle and through an individual's entire life history. The book focuses on timing of breeding, clutch size, egg size, and egg quality, and parental care. It also provides a primer on female reproductive physiology and considers trade-offs and carryover effects between reproduction and other life history stages. In each chapter, Williams describes individual variation in the trait of interest and the evolutionary context for trait variation. He argues that there is only a rudimentary and in some cases nonexistent understanding of the physiological mechanisms that underpin individual variation in the major reproductive life history traits and that research efforts should refocus on these key unresolved problems by incorporating detailed physiological studies into existing long-term population studies, generating a new synthesis of physiology, ecology, and evolutionary biology.

Characterizing Human Psychological Adaptations Gregory R. Bock, Gail Cardew, 2008-04-30 This book contains chapters by some of the leading figures in the field of evolutionary psychology. The latest data are presented on evolutionary theories in perception, information, various aspects of social behaviour, language, learning, and aggression. A common theme running through the printed discussions in this book is the important problem of how we can develop and test rigorous characterizations of evolved mental adaptations.
