If we want our pupils to develop fluency understanding and the ability to solve complex problems then it is vital that teachers develop the ability to select adapt and design appropriate mathematical tasks In *Mathematical Tasks The Bridge Between Teaching and Learning* Chris McGrane and Mark McCourt a range of practical approaches strategies and principles behind the design and effective use of tasks in the mathematics classroom that lead to all pupils becoming successful learners First hand interviews with world class mathematics education experts and practicing teachers bring to life the ideas behind how tasks can act as a bridge between what the teacher wants the pupil to make sense of and what the pupil actually does makes sense of tasks are how we enable pupils to enact mathematics it is only by being mathematical that pupils can truly make connections across mathematical ideas and understand the bigger picture This is a book for classroom teachers Chris McGrane offers a range of practical examples for nurturing deep learning in mathematics that can be adapted and embedded in one s own classroom practice This is also a book for those who are interested in the theory behind tasks Chris and his interviewees examine the key role tasks play in shaping learning teaching curriculum and assessment Suitable for teachers at all stages in their careers and teachers are encouraged to return to the book from time to time over the years to notice how their use of tasks in the classroom changes as they themselves develop **Resources in Education**, 1997 *Kepler's Philosophy and the New Astronomy* Rhonda Martens, 2000-10-29 Here Rhonda Martens offers the first extended study of Kepler s philosophical views and shows how those views helped him construct and justify the new astronomy The Ark of Mars Leigh Brackett, 2020-11-17 There are men in space again The catastrophic words went out from Mars to damp Venus and frost wracked Mercury to the lunar colonies of Jupiter and Saturn To all points of the system the warning was screamed Halt those fleeing star pilgrims those space sons of the Ark of Mars Leigh Brackett was the undisputed Queen of Space Opera and the first woman to be nominated for the coveted Hugo Award She wrote short stories novels and scripts for Hollywood She wrote the first draft of the *Empire Strikes Back* shortly before her death in 1978 Math Challenges, Grades 4-6 Robert W. Developing Synaesthesia Nicolas Rothen, Julia Simner, Beat Meier, 2015-07-24 Synaesthesia is a condition in which a stimulus elicits an additional subjective experience For example the letter E printed in black the inducer may trigger an additional colour experience as a concurrent e.g. blue Synaesthesia tends to run in families and thus a genetic component is likely However given that the stimuli that typically induce synaesthesia are cultural artefacts a learning component must also be involved Moreover there is evidence that synaesthetic experiences not only activate brain areas typically involved in

processing sensory input of the concurrent modality synaesthesia seems to cause a structural reorganisation of the brain. Attempts to train non synaesthetes with synaesthetic associations have been successful in mimicking certain behavioural aspects and posthypnotic induction of synaesthetic experiences in non synaesthetes has even led to the according phenomenological reports. These latter findings suggest that structural brain reorganization may not be a critical precondition but rather a consequence of the sustained coupling of inducers and concurrents. Interestingly synaesthetes seem to be able to easily transfer synaesthetic experiences to novel stimuli. Beyond this, certain drugs e.g. LSD can lead to synaesthesia-like experiences and may provide additional insights into the neurobiological basis of the condition. Furthermore, brain damage can both lead to a sudden presence of synaesthetic experiences in previously non synaesthetic individuals and a sudden absence of synaesthesia in previously synaesthetic individuals. Moreover, enduring sensory substitution has been effective in inducing a kind of acquired synaesthesia. Besides informing us about the cognitive mechanisms of synaesthesia, synaesthesia research is relevant for more general questions, for example about consciousness such as the binding problem, about crossmodal correspondences and about how individual differences in perceiving and experiencing the world develop. Hence the aim of the current Research Topic is to provide novel insights into the development of synaesthesia both in its genuine and acquired form. We welcome novel experimental work and theoretical contributions e.g. review and opinion articles focussing on factors such as brain maturation, learning, training, hypnosis, drugs, sensory substitution and brain damage and their relation to the development of any form of synaesthesia.
