Cabling Guidelines for Electromagnetic Compatibility AE-4 Electromagnetic Compatibility (EMC) Committee, 2009 These cable practice recommendations tend toward design guidance rather than standardization EMC achievement tests can be standardized but the means for achievement should not be constrained The material can best be described as an essay on cabling and the theme is that a cable is just a part of a complete circuit the interconnect circuit Cable EMC performance is thus determined largely by circuit design it is unrealistic to expect cabling techniques to compensate for improper impedance symmetry or waveform in the circuit

effectively with cables in the workplace Coverage spans cabling system design and installation electrical and security issues cabling components and documenting and troubleshooting your system Includes a 32 page color insert for quick identification of connectors and cables as well as vendor information and recommendations Nearly 70 percent of all network related problems result from poor cabling or cabling problems but the cables hubs and bridges that carry a company's vital data remain the most neglected and under appreciated components of the typical network Writing from extensive and sometimes painful experience but with a sense of humor networking experts and trainers David Groth and Jim McBee show you how to avoid these problems how to build an infrastructure for optimum performance now and in the future and how to make your cabling system a thing of unseen beauty and a joy to users
