Handbook of Laboratory Health and Safety Measures S.B. Pal, 2013-03-14 During the past two decades many books governmental reports and regulations on safety measures against chemicals fire microbiological and radioactive hazards in laboratories have been published from various countries These topics have also been briefly discussed in books on laboratory planning and management The application of various scientific instruments based on different ionizing and non ionizing radiations have brought new safety problems to the laboratory workers of today irrespective of their scientific disciplines be they medicine natural or life sciences However no comprehensive laboratory handbook dealing with all these hazards some of which are recently introduced had so far been available in a single volume Therefore it was thought worthwhile to publish this Handbook on safety and health measures for laboratories with contributions from several experts on these subjects As this second edition

of the Handbook like the first edition is a multiauthor volume some duplication in content among chapters is unavoidable in order to maintain the context of a chapter as well as make each chapter complete An attempt has also been made to maintain the central theme which is how to work in a laboratory with maximum possible environmental safety

Computational Colour Science Using MATLAB Stephen Westland, Caterina Ripamonti, Vien Cheung, 2012-06-29 Computational Colour Science Using MATLAB 2nd Edition offers a practical problem based approach to colour physics The book focuses on the key issues encountered in modern colour engineering including efficient representation of colour information Fourier analysis of reflectance spectra and advanced colorimetric computation Emphasis is placed on the practical applications rather than the techniques themselves with material structured around key topics These topics include colour calibration of visual displays computer recipe prediction and models for colour appearance prediction Each topic is carefully introduced at three levels to aid student understanding First theoretical ideas and background information are discussed then explanations of mathematical solutions follow and finally practical solutions are presented using MATLAB The content includes A compendium of equations and numerical data required by the modern colour and imaging scientist Numerous examples of solutions and algorithms for a wide range of computational problems in colour science Example scripts using the MATLAB programming language This 2nd edition contains substantial new and revised material including three innovative chapters on colour imaging psychophysical methods and physiological colour spaces the MATLAB toolbox has been extended with a professional optimized toolbox to go alongside the current teaching toolbox and a java toolbox has been added which will interest users who are writing web applications and or applets or mobile phone applications Computational Colour Science Using MATLAB 2nd Edition is an invaluable resource for students taking courses in colour science colour chemistry and colour physics as well as technicians and researchers working in the area In addition it acts a useful reference for professionals and researchers working in colour dependent industries such as textiles paints print electronic imaging Review from First Edition highly recommended as a concise introduction to the practicalities of colour science Color Technology 2004
