EXTENDING FROM 1D TO 2D: FUNCTIONS
A COMMON CORE STATE STANDARD (A.2)

Most eighth grade mathematics students learn the concept of a function. This level of the progression presented in mathematics, the definition of a function is simply in the point of being really understood. Make sure to learn the following definition:

Definition: A function is any "rule" that assigns exactly one output value to each input value (number). These rules can be understood in different ways, the most common being equations, graphs, tables, and verbal rules. We call the input variable *independent* and output variable *dependent*.

Example 18: The internet music service offers a plan whereby users pay a flat monthly fee of \$9 and use their download songs for 10 songs each.

1a) What are the independent and dependent variables in this situation?

Independent: _____
Dependent: _____

1b) What variable below has a variety of independent values?

Number of Downloads, x	0	5	10	20
Amount Charged, y				

1c) Can the number of downloads be approximated by the variable x and the amount charged in dollars be represented by the variable y ? Write an equation that models y as a function of x .

1d) Based on the equation you found in part (c), produce a graph of the function for all values of x on the interval $0 \leq x \leq 30$. Use a calculator, graph, or generate additional coordinate pairs to the ones you found in part (b).
