

Force & Motion

Force is the energy it takes to do work. When you push or pull an object, it takes energy to get that object to move. Motion is the change in position an object experiences because of a force applied.

Push

A force to move something away from you.

Pull

A force to move something closer to you.

Gravity

A force that brings objects toward the earth. When an apple falls off a tree, gravity is the reason it hits the ground.

Friction

A force that slows or stops motion when two objects rub together.

Magnetism

A force that attracts or repels objects. Opposite poles attract and like poles repel. Magnets attract iron, nickel, and cobalt.

Acceleration

The ability for an object to gain speed in a short amount of time. As the ball rolls down the hill, it will continue to gain speed.

Forty-five New Force and Motion Assessment Probes Page Keeley,Rand Harrington,2010 Nationally known science
educator Page Keeley principal author of the hugely popular four volume NSTA Press series Uncovering Students Ideas in
Science has teamed up with physicist and science educator Rand Harrington to write this first volume in their new series on
physical science They begin with one of the most challenging topics in physical science force and motion The 45 assessment
probes in this book enable teachers to find out what students really think about key ideas in force and motion The Teacher
Notes which can be used before and after administering the probe provide background information on the purpose of the
probe related concepts an explanation for the teacher of the force and motion idea being taught related ideas in Benchmarks
for Science Literacy and the National Science Education Standards research on typical student misconceptions related to the
force and motion concept and suggestions for instruction and assessment The book specifies grade spans K 4 5 8 9 12 for
each probe based on state and national standards and suggests ways to adapt a probe for a different grade span or context
