When the foot pedal is released, the spring, 1, forces the piston, 2, in the master cylinder to move backward. When the piston moves backward, it pulls the valve stem and seal, 3, away from the reservoir supply passage, 4. This relieves the pressure in the pressure passage, 5, which releases the brakes. Reservoir oil in passage, 4, is now allowed to "connect" with oil trapped in pressure passage, 5. This guarantees the master cylinder and pressure supply passage will remain full of oil at all times.

Brake Caliper

The caliper, 1, is mounted on the front right side of the transmission. The caliper is activated by pressure created from the master cylinder. This pressure is transferred from the master cylinder to the caliper by a steel pressure supply line, 2. The caliper is also activated by mechanical linkage, 3, from the park brake.
